have dedicated Program Committee comprising many internationally recognized researchers and industrial practitioners. We would like to thank the members of the Program Committee and associated reviewers for their contribution in making this conference a success. We received 70 submissions and each paper was reviewed by at least three Program Committee members, four for papers with an author on the Program Committee. The entire reviewing process was supported by the Conference Management Toolkit provided by Microsoft. In total, 20 submissions were accepted as full papers and 3 submissions were accepted as short papers.

**The Development of Component-based Information Systems** Sergio de Cesare, Mark Geoffrey Lycett, Robert Macredie, 2015-05-15 This work provides a comprehensive overview of research and practical issues relating to component based development information systems CBIS. Spanning the organizational, developmental and technical aspects of the subject, the original research included here provides fresh insights into successful CBIS technology and application. Part I covers component based development methodologies and system architectures. Part II analyzes different aspects of managing component based development. Part III investigates component based development versus commercial off the shelf products COTS, including the selection and trading of COTS products.

**Component-Based Software Engineering** Grace A. Lewis, Iman Poernomo, Christine Hofmeister, 2009-06-18 The 2009 Symposium on Component Based Software Engineering CBSE 2009 was the 12th in a series of successful events that have grown into the main forum for industrial and academic experts to discuss component technology. Component based software engineering CBSE has emerged as the underlying technology for the assembly of executable software systems. In essence, CBSE is about composing computational building blocks to construct larger building blocks that fulfill client needs. Most software engineers are involved in some form of component based development. Nonetheless, the implications of CBSE adoption are wide reaching and its challenges grow in tandem with its uptake, continuing to inspire our scientific speculation. Component based development necessarily involves elements of software architecture, modular software design, software verification, testing, configuration and deployment. This year's submissions represent a cross section of CBSE research that touches upon all these aspects. The theoretical foundations of component specification, composition analysis and verification continue to pose research challenges. What exactly constitutes an adequate semantics for communication and composition so that bigger things can be built from smaller things? How can formal approaches facilitate predictable assembly through better analysis? We have grouped the proceedings into two sub-themes that deal with these issues: component models and communication and composition. At the same time, the world is changing.
