Activity-Based Information Systems Mohan Nair,1999-08-05 Much has been written on ABC M but it is rare to find implementation secrets put together in such an approachable format Ashok Vadgama Manager Configuration Management and ABM Motorola Whether you are looking to improve your business s bottom line or streamlining your company s financial decisions Activity Based Information Systems provides you with the know how and expert information you need to get started on the road to success This is the first book of its kind that examines the complex choices and opportunities available to corporations and individuals embarking on the ABC M journey Rather than focusing on the pitfalls of establishing this information system Mohan Nair outlines in plain English the seven keys to establishing the proper conditions for a successful ABC M implementation In this unique and groundbreaking book you ll also learn about The history and framework behind activity based information systems The three factors of technology people and processes used in implementation How to make the critical move from implementation start up to education and on through the production phases Four cases of actual implementation and the unique contribution which ABC M makes in the pursuit of financially endorsed and IT maintained operational information The proper checklist to have for basic evaluations of specific information systems Even the latest high speed technology and desktop applications now routinely used by corporations around the world the most essential business information that operating managers and CFOs can use today is still unreachable It doesn t have to be The field of activity based cost management ABC M is not simply a cost exercise for technically savvy cost managers it is a process which can be utilized by nearly any type of business Implementing an ABC M project involves focusing on the management of activities as a means to improve the value received by customers and the subsequent profit achieved by providing this value to customers on a continual basis The information obtained from ABC and activity based management ABM is quickly becoming vital for operating managers who rely on a high quality ABC information system to meet their demands Now the president of Oregon s ABC Technologies author Mohan Nair meets those demands with Activity Based Information Systems Providing a framework for implementing activity based information systems ABIS Mr Nair using nontechnical language examines the strategies for technology evaluation and design

their organizational and financial implications and technology's limitations. Executives will appreciate the successful implementation strategies contained in this book: strategies that are not focused on avoiding pitfalls but utilized to create the conditions for success. With proven insights backed by experience, not doctrines, Mr. Nair explains how most implementations have generally focused on the process and people views of an ABCM endeavor, yet all three views, including a technological view, must be understood and coexist routinely in order to have a truly successful and continuous implementation of ABCM. However, the book does not simply demonstrate ABCM and ABIS concepts. Business managers and consultants alike will value Mohan Nair's perspectives on time-based management, business process reengineering, throughput maximization, budget justification, strategic cost management, and profitability management, as well as how these initiatives relate to ABM. In today's computer-enabled business world, it pays to have an in-depth knowledge of costing along with an appreciation for capitalizing on the use of systems and software. There is no simple recipe for overnight implementation; however, by following Mohan Nair's sevenfold steps to successful ABCM implementation, your company can create the best conditions for success and meet the future head-on with an activity-based information system that is operationally used, financially endorsed, and IT-maintained.

The Travel Behavior of Home-based Teleworkers Qiang Hong, 2002. The last decade of the 20th century witnessed the rapid development of new information technologies. The emergence of the Internet, the growth of the mobile communications technologies, and the diffusion of computers not only changed the way we live and work but also provided new dimensions for travel demand decisions such as teleworking and other tele-services. Based on the empirical data source from the 1995 NPTS, this study examines the transportation effects of teleworking through a comparative analysis of travel behavior between home-based teleworkers and non-teleworkers. Both daily and annual aggregate travel patterns are investigated at the individual worker and household levels. The research findings indicate that home-based teleworkers have significantly higher annual VMT and longer commuting distances than non-teleworkers. The frequency of teleworking is even positively correlated with annual VMT. Teleworkers' daily travel on a teleworking day is not reduced relative to days in which they commute to work as might be expected, although they have the maximum freedom to select their trip starting time. Overall, teleworkers still could contribute to peak-hour traffic reduction when their adoption level and teleworking frequency increase. This study is one of the first to systematically evaluate the transportation impacts of new information technologies at the national level. Its empirical findings challenge the fundamental assumption of travel savings by teleworkers and provide an important basis for policy-driven changes in transportation planning, such as considering the specific transport requirements of teleworkers and pursuing the socially desirable transport consequences of teleworking. A comprehensive planning approach, namely incorporating transportation, telecommunication, and community development policies, is recommended, aiming at increasing individual and societal benefits of expanded IT applications in our daily lives.
