

XHTML Basics

- Web pages used to be written exclusively in html
 - Xhtml is a variation that includes the ability to write code in xml notation (xml = extensible markup language)
- While we will go far beyond XHTML in our web design this semester, we have to start somewhere, so we look at the basics of html/xhtml here
 - Your web pages will contain a minimum of basic tags and as you expand your capabilities, you will include various html formatting commands
- An html command will appear in `<>` marks
 - Most html commands have start commands and stop commands that surround the text (or other items) that the command(s) will impact
 - For instance, to bold face text, you use `` and end the text with `` as in: isn't this ``exciting``?
 - Notice that the ? will not be bold faced
