Geffner,Rui Prada,Isabel Machado Alexandre,Nuno David,2008-10-01 IBERAMIA is the international conference series of the Ibero American Artificial Intelligence community that has been meeting every two years since the 1988 meeting in Barcelona The conference is supported by the main Ibero American societies of AI and provides researchers from Portugal Spain and Latin America the opportunity to meet with AI researchers from all over the world Since 1998 IBERAMIA has been a widely recognized international conference with its papers written and presented in English and its proceedings published by Springer in the LNAI series This volume contains the papers accepted for presentation at Iberamia 2008 held in Lisbon Portugal in October 2008 For this conference 147 papers were submitted for the main track and 46 papers were accepted Each submitted paper was reviewed by three members of the Program Committee PC coordinated by an Area Chair In certain cases extra reviewers were recruited to write additional reviews The list of Area Chairs PC members and reviewers can be found on the pages that follow The authors of the submitted papers represent 14 countries with topics covering the whole spectrum of themes in AI robotics and multiagent systems knowledge representation and constraints machine learning and planning natural language processing and AI applications The program for Iberamia 2008 also included three invited speakers Christian Lemaitre LANIA Mexico R Michael Young NCSU USA and Miguel Dias Microsoft LDMC Lisbon as well as several workshops **Approaching human intelligence through chemical systems: Development of unconventional**

chemical artificial intelligence Pier Luigi Gentili,Konrad Szaciłowski,Andrew Adamatzky,2023-11-27 Although human intelligence is deeply investigated by neuroscientists psychologists philosophers and AI researchers we still lack of a widely accepted definition of what it is If we exploit the emergence theory from Complexity Science to give a definition we might state that human intelligence is the emergent property of the human nervous system Such fascinating emergent property

allows us to handle both accurate and vague information by computing with numbers and words Moreover it allows us to reason speak and take rational decisions in an environment of uncertainty partiality and relativity of truth when the Incompatibility Principle holds As the complexity of a system increases accuracy and significance become almost mutually exclusive characteristics of our statements Finally our intelligence allows us recognizing quite easily variable patterns Therefore it is worthwhile investigating human intelligence and trying to mimic it by developing Artificial Intelligence Nowadays Artificial Intelligence is in vogue it is applied in both basic and applied science Traditionally there are two strategies to develop Artificial Intelligence A strategy consists in writing human like intelligent software running in von Neumann computers or special purpose hardware The other strategy consists in neuromorphic engineering Neuromorphic engineering implements surrogates of neurons through non biological systems either for neuro prosthesis or to design brain like computing machines A third strategy is now blooming and it consists in using molecular supramolecular materials and systems chemistry to mimic some basic functions of human intelligence such as Boolean multi valued logic gates and Fuzzy logic This third strategy is originating Chemical Artificial Intelligence CAI A relevant purpose of CAI is to design modules for Chemical Robots A Chemical Robot is thought of as a molecular assembly that reacts autonomously to its environment by probing it with molecular sensors making decisions by its intrinsic Artificial Neural Networks or logic gates and performing actions upon its environment through molecular effectors The intelligent activities of any Chemical Robot should be sustained energetically by a metabolic unit Chemical Robots should be easily miniaturized and implanted in living beings to interplay with cells or organelles for biomedical applications They should become auxiliary elements of the natural immune system

Narratives Crossing Boundaries Joachim Friedmann,2023-10-02 As the dominant narrative forms in the age of media convergence films and games call for a transmedial perspective in narratology Games allow a participatory reception of the story bringing the transgression of the ontological boundary between the narrated world and the world of the recipient into focus These diverse transgressions medial and ontological are the subject of this transdisciplinary compendium which covers the subject in an interdisciplinary way from various perspectives game studies and media studies but also sociology and psychology to take into account the great influence of storytelling on social discourses and human behavior
