**Fatal Abstraction** Darryl Campbell,2025-04-08 A tech insider explains how capitalism and software development make for such a dangerous mix Software was supposed to radically improve society Outdated mechanical systems would be easily replaced programs like PowerPoint would make information flow more freely social media platforms like Facebook would bring people together and

generative AI would solve the world's greatest ills. Yet in practice few of the systems we looked to with such high hopes have lived up to their fundamental mandate. In fact in too many cases they've made things worse, exposing us to immense risk at the societal and the individual levels. How did we get to this point? In *Fatal Abstraction* Darryl Campbell shows that the problem is managerial software programs created and overseen not by engineers but by professional managers with only the most superficial knowledge of technology itself. The managerial ethos dominates the modern tech industry from its globe-spanning giants all the way down to its trendy startups. It demands that corporate leaders should be specialists in business rather than experts in their company's field; that they manage their companies exclusively through the abstractions of finance and that profit margins must take priority over developing a quality product that is safe for the consumer and beneficial for society. These corporations rush the development process and package cheap unproven, potentially dangerous software inside sleek and shiny new devices. As Campbell demonstrates, the problem with software is distinct from that of other consumer products because of how quickly it can scale to the dimensions of the world itself and because its inner workings resist the efforts of many professional managers to understand it with their limited technical background. A former tech worker himself, Campbell shows how managerial software fails and when it does what sorts of disastrous consequences ensue from the Boeing 737 MAX crashes to a deadly self-driving car to PowerPoint propaganda and beyond. Yet just because the tech industry is currently breaking its core promise does not mean the industry cannot change or that the risks posed by managerial software should necessarily persist into the future. Campbell argues that the solution is tech workers with actual expertise establishing industry-wide principles of ethics and safety that corporations would be forced to follow. *Fatal Abstraction* is a stirring rebuke of the tech industry's current managerial excesses and also a hopeful glimpse of what a world shaped by good software can offer. This beautifully illustrated full-color book covers the basics to help you develop your eye and produce attractive work. Topics include: The basics of effective design that communicates its intended message; Pre-design planning; 13 Layout Sins to avoid; Basic typography; Working with color; Storyboarding for video; Web and presentations; Information graphics; Mini Art School: all the basics in one chapter; Outputting your work. *Ethics of the Algorithm* Todd Presner, 2024-09-24. How computational methods can expand how we see, read, and listen to Holocaust testimony. The Holocaust is one of the most documented and now digitized events in human history. Institutions and archives hold hundreds of thousands of hours of audio and video testimony composed of more than a billion words in dozens of languages with millions of pieces of descriptive metadata. It would take several lifetimes to engage with these testimonies one at a time.

Computational methods could be used to analyze an entire archive but what are the ethical implications of listening to Holocaust testimonies by means of an algorithm In this book Todd Presner explores how the digital humanities can provide both new insights and humanizing perspectives for Holocaust memory and history Presner suggests that it is possible to develop an ethics of the algorithm that mediates between the ethical demands of listening to individual testimonies and the interpretative possibilities of computational methods He delves into thousands of testimonies and witness accounts focusing on the analysis of trauma language voice genre and the archive itself Tracing the affordances of digital tools that range from early proto computational approaches to more recent uses of automatic speech recognition and natural language processing Presner introduces readers to what may be the ultimate expression of these methods AI driven testimonies that use machine learning to process responses to questions offering a user experience that seems to replicate an actual conversation with a Holocaust survivor With *Ethics of the Algorithm* Presner presents a digital humanities argument for how big data models and computational methods can be used to preserve and perpetuate cultural memory
