Original Brand Manufacturing Business Model Young Won Park, Geon-Cheol Shin, Kyung-Soo Lee, 2025-09-01 This book aims to examine the transition of firms from original equipment manufacturing OEM and original design manufacturing ODM to original brand manufacturing OBM focusing on how businesses can evolve to capture greater value in global markets. It highlights the importance of digital technologies like IoT, big data, and AI in reshaping traditional business models, driving innovation, and enabling firms to move from cost-efficient manufacturing to building consumer-centric brands. The book provides insights into the challenges of this transformation, including structural barriers, market competition, and the need for significant investments in resources, innovation, and leadership. The book is divided into four sections. The first explores the historical evolution of OEM, ODM, and OBM business models and their transformation in the digital era. The second outlines key strategies for transitioning to OBM, covering global positioning, R D, marketing, production, and supply chain management. It emphasizes the importance of design management, branding, and leveraging partnerships to achieve long-term competitiveness. The third section delves into sustainability and the circular economy, showcasing how OBM firms can integrate eco-friendly practices into their operations to enhance value and address growing consumer demand for sustainability. The final section provides an outlook on the future of OBM with strategic pathways and policy recommendations to foster OBM business models. A deep case study in the cosmetics industry offers practical examples of successful transitions to OBM, illustrating diverse approaches and best practices. The book also introduces frameworks and tools for firms to assess and enhance their capabilities, providing actionable strategies for business leaders and policymakers. By addressing the complexities of moving up the value chain, this book serves as a roadmap for firms aiming to establish themselves as global leaders in innovation, branding, and sustainability.

Media Education for a Digital Generation Julie Frechette, Rob Williams, 2015-10-14 Media education for digital citizenship is predicated upon the ability to access, analyze, evaluate, and produce media content and communication in a variety of forms. While many media literacy approaches overemphasize the end goal of accessing digital media content through the acquisition of various technology, software, apps, and analytics, this book argues that the goals for comprehensive and critical digital literacy require grasping the means through which communication is created, deployed, used, and shared, regardless of which tools or platforms are used for meaning-making and social interaction. Drawing upon the intersecting matrices of digital literacy and media literacy, the volume provides a framework for developing critical digital literacies by exploring the necessary skills and competencies for engaging students as citizens of the digital world.
