term using reduced form regressions to predict AI adoption across Europe and considering relevant regulation that restricts AI use heterogeneously across tasks occupations and sectors We find that the medium term productivity gains for Europe as a whole are likely to be modest at around 1 percent cumulatively over five years While economically still moderate these gains are still larger than estimates by Acemoglu 2024 for the US They vary widely across scenarios and countries and are substantially larger in countries with higher incomes Furthermore we show that national and EU regulations around occupation level requirements AI safety and data privacy combined could reduce Europe s productivity gains by over 30 percent if AI exposure were 50 percent lower in tasks occupations and sectors affected by regulation **Information**
