**Sequencing and Phylogenetic Analysis as a Tool in Molecular Epidemiology of Veterinary Infectious Diseases, volume II** Iryna Goraichuk, Amro Hashish, Mohamed H. Maarouf, 2025-12-03 The development of sequencing technologies dramatically changed the course of epidemiological studies of infectious diseases Virus genomics have already been used to investigate infectious disease outbreaks for several decades Since the introduction of Next generation Sequencing NGS the viral or bacterial whole genomes can be sequenced in a matter of days Now thanks to advances in high throughput sequencing and decreasing costs most virus genomics studies utilize data sets containing tens to thousands of complete genomes While well established sequencing platforms still provide robust insights the real time sequencing approaches and analysis opens up entirely new applications in the field of molecular epidemiology The advances in genome sequence technologies have improved the ability to track and understand the bacterial and viral transmission of animal diseases Phylogenetic analysis of these genomes can be used to clarify the key questions in infectious disease epidemiology from the initial detection and characterization of outbreak viruses to transmission chain tracking and outbreak mapping which can now be much more accurately addressed using recent advances in virus sequencing and phylogenetics The threat of emerging and re emerging infectious diseases continues to be a challenge to public and global health security as well as animal health and highlights that sequencing is not just a critical tool in bio surveillance it can also play a major role in pandemic or outbreak response The scope of the Research Topic is to explore the current status and future perspectives of sequencing technologies in the control and prevention of infectious diseases including the elucidation of diagnosis molecular evolution distribution and transmission of important veterinary infectious diseases The collection welcomes but is not limited

*Beyond borders: exploring diverse roles of heterocyclic compounds in combatting infections and cancer* Afzal Basha Shaik, Richie Bhandare, Mukhlesur Rahman, Kamal Dua, 2025-04-01

There is an urgent need for the discovery of new drugs against infectious diseases and cancer. Globally, infectious diseases are prevalent with pathogens constantly evolving, leading to a rise in drug-resistant strains. This necessitates the development of new antimicrobial agents capable of overcoming resistance. Moreover, the COVID-19 pandemic highlighted the critical need for rapid drug development against emerging infectious diseases. Cancer, a leading cause of death worldwide, presents challenges due to its complexity and diversity and the unique genetic profiles of patients. The American Cancer Society notes increasing cancer rates, underscoring the need for more effective targeted therapies. In this context, heterocyclic compounds in natural and medicinal chemistry are promising for their structural diversity and reactivity, showing potential in treating infections and cancer by targeting specific cell lines and pathways. This Research Topic focuses on the advancements and applications of heterocyclic compounds, emphasizing their significance in modern medicinal chemistry. The goal is to delve into the multifaceted applications of heterocyclic compounds in addressing two of the most pressing health challenges: infectious diseases and cancer. The core issue this research addresses is the increasing resistance to traditional treatments in infectious diseases and the intricacies of cancer treatment, complicated by its genetic diversity and adaptability. To tackle these issues, this Research Topic aims to gather and showcase cutting-edge research on the isolation, design, synthesis, and application of heterocyclic compounds. Heterocyclic compounds are known for their structural diversity and unique biological properties, offering promising avenues for developing novel therapeutics. Recent advances in this field have demonstrated the potential of heterocyclic compounds to produce more targeted and effective treatments with fewer side effects. By collating research on novel heterocyclic compounds, their mechanisms of action, and their clinical applications, this Research Topic seeks to contribute to the development of next-generation drugs. It aims to foster a deeper understanding of how these compounds interact with biological systems, overcome resistance mechanisms in pathogens, and target specific pathways in cancer cells. The ultimate aim is to advance medicinal chemistry and pharmacology, leading to novel treatments for infectious diseases and cancer. This Research Topic aims to collect important advancements made in the field of medicinal and natural product chemistry, including the isolation, design, synthesis, and applications of potential heterocyclic compounds as potential anti-infective and anticancer agents. We welcome Original Research, Review, Mini Review, and Perspective articles on themes including but not limited to Heterocyclic compounds with potential anti-
