Sperling, 2013-03-09 Polymer blends grafts and blocks broadly defined encompass all of the ways in which two or more kinds of polymer molecules can be mixed and or joined. Because these materials exhibit non linear and often synergistic properties they have found increasing application in our technology. Their multifarious uses have in turn spurred new research efforts to find yet different ways of joining two kinds of polymer molecules with novel physical and or mechanical behavior patterns. In August 1973 the Polymer Division of the American Chemical Society sponsored a symposium at its meeting in Chicago on Polymer Blends Grafts and Blocks. This book collects the papers presented at that symposium. Yet it is more than just a collection of papers for we here display the thinking and efforts of a number of top ranking American and foreign scientists in one of the world's more active research areas. The symposium emphasized the interrelationships among synthetic detail morphology and physical and mechanical properties. Several novel syntheses were presented. These include oxidation resistant thermoplastic elastomers. Holden a graft copolymer based thermoplastic elastomer. Kennedy and Smith a cationic graft copolymer. Kennedy, Charles and Davidson an AB crosslinked copolymer. Bamford and Eastmond an interpenetrating polymer network. Donatelli, Thomas and Sperling and simultaneous interpenetrating networks. Frisch, Klempner, Frisch and Ghiradella. Most polymer blends grafts and blocks exhibit two phases. The theory of microdomain structure was discussed. Helfand. The different ways that the two molecules can be joined together was examined. Kennedy and their topology was explored. Sperling. **2nd International Symposium on Polymer Characterization** F. A.
