human decision making because if sports teams are getting it wrong this badly how do you know you're not? Sometimes the decisions that teams make are simply inexplicable. Consider sports teams have an immense amount of detailed quantifiable information to draw upon more than in virtually any other industry. They have powerful incentives for making good decisions. Everyone sees the results of their choices and the consequences for failure are severe. And yet they keep making the same mistakes over and over again systematic mistakes you'd think they'd learn how to avoid. Now two leading sports economists reveal those mistakes in basketball baseball football and hockey and explain why sports decision makers never seem to learn their lessons. You'll learn which statistics are connected to wins and which aren't and which statistics can and can't predict the future. Along the way David Berri and Martin Schmidt show why a quarterback's place in the draft tells you nothing about how he'll perform in the NFL why basketball decision makers don't focus on the factors that really correlate with NBA success why famous coaches don't deliver better results and much more.

Player Won-Lost Records in Baseball Tom Thress, 2017-09-25 Baseball analysts often criticize pitcher win loss records as a poor measure of pitcher performance as wins are the product of team performance. Fans criticize WAR Wins Above Replacement because it takes in theoretical rather than actual wins. Player won lost records bridge the gap between these two schools of thought giving credit to all players for what they do without credit or blame for teammates performance and measuring contributions to actual team wins and losses. The result is a statistic of player value that quantifies all aspects of individual performance allowing for robust comparisons between players across different positions and different seasons. Using play by play data this book examines players won lost records in Major League Baseball from 1930 through 2015.

Backstop William F. McNeil, 2005-12-27 It's often said that catcher is the most important most demanding defensive position in baseball. This view explains why so many light hitting catchers have enjoyed long and by all accounts successful major league careers. Yet arguments over the all time greats invariably privilege offensive standouts and even among these players batting statistics are more likely than fielding numbers to affect ranking. So what historically have been the expectations for major league catchers and who stands as the greatest in a more balanced view of offensive and defensive contributions. In Part I of this book the history of catching and catchers is discussed in detail with attention to the most celebrated players of each era. In Part II the author employs sabermetric formulas to rank the 50 greatest catchers since 1920 when changes to the rules the parks and the ball dramatically changed the way baseball was played. Also included is a chapter on catchers of the 19th century deadball era and Negro Leagues whose career statistics are either incomplete inaccurate or produced under markedly different playing conditions and rules.
