Causal Learning Vol 34 Advances In Research And Theory:

Towards a Theory of Thinking Britt Glatzeder, Vinod Goel, Albrecht Müller, 2010-03-20 What is Thinking Trying to Define an Equally Fascinating and Elusive Phenomenon Human thinking is probably the most complex phenomenon that evolution has come up with until now There exists a broad spectrum of definitions from subsuming almost all processes of cognition to limiting it to language based sometimes even only to formalizable reasoning processes We work with a medium sized definition according to which thinking encompasses all operations by which cognitive agents link mental content in order to gain new insights or perspectives Mental content is thus a prerequisite for and the substrate on which thinking operations are executed The largely unconscious acts of perceptual object stabilization categorization emotional evaluation and retrieving all the above from memory inscriptions are the processes by which mental content is generated and are therefore seen as prerequisites for thinking operations In terms of a differentia specifica the notion of thinking is seen as narrower than the notion of cognition and as wider than the notion of reasoning Thinking is thus seen as a subset of cognition processes and reasoning processes are seen as a subset of thinking Besides reasoning the notion of thinking includes also nonexplicit intuitive and associative processes of linking mental content According to this definition thinking is not dependant on language i.e. also many animals and certainly all mammals show early forms of thinking

The Probabilistic Mind Nick Chater, Mike Oaksford, 2008 The Probabilistic Mind is a follow up to the influential and highly cited Rational Models of Cognition OUP 1998 It brings together developments in understanding how and how far high level cognitive processes can be understood in rational terms and particularly using probabilistic Bayesian methods

The Oxford Handbook of Comparative Cognition Thomas R. Zentall, Edward A. Wasserman, 2012-03-20 In the past decade the field of comparative cognition has grown and thrived No less rigorous than purely behavioristic investigations examinations of animal intelligence are useful for scientists and psychologists alike in their quest to understand the nature and mechanisms of intelligence Extensive field research of various species has yielded exciting new areas of research integrating findings from psychology behavioral ecology and ethology in a unique and wide ranging synthesis of theory and research on animal cognition The Oxford Handbook of Comparative Cognition contains sections on perception and illusion attention and search memory processes spatial cognition conceptualization and categorization problem solving and behavioral flexibility and social cognition processes including findings in primate tool usage pattern learning and counting The authors have incorporated findings and theoretical approaches that reflect the current state of the field This comprehensive volume will be a must read for students and scientists who want to know about the state of the art of the modern science of comparative cognition

Thinking With Data Marsha C. Lovett, Priti Shah, 2012-08-21 The chapters in Thinking With Data are based on presentations given at the 33rd Carnegie Symposium on Cognition The Symposium was motivated by the confluence of three emerging trends 1 the increasing need for people to think effectively

with data at work at school and in everyday life 2 the expanding technologies available to support people as they think with data and 3 the growing scientific interest in understanding how people think with data What is thinking with data It is the set of cognitive processes used to identify integrate and communicate the information present in complex numerical categorical and graphical data This book offers a multidisciplinary presentation of recent research on the topic Contributors represent a variety of disciplines cognitive and developmental psychology math science and statistics education and decision science The methods applied in various chapters similarly reflect a scientific diversity including qualitative and quantitative analysis experimentation and classroom observation computational modeling and neuroimaging Throughout the book research results are presented in a way that connects with both learning theory and instructional application The book is organized in three sections Part I focuses on the concepts of uncertainty and variation and on how people understand these ideas in a variety of contexts Part II focuses on how people work with data to understand its structure and draw conclusions from data either in terms of formal statistical analyses or informal assessments of evidence Part III focuses on how people learn from data and how they use data to make decisions in daily and professional life

Proceedings of the Twentieth Annual Conference of the Cognitive Science Society Morton Ann Gernsbacher, Sharon J. Derry, 2022-05-16 This volume features the complete text of the material presented at the Twentieth Annual Conference of the Cognitive Science Society As in previous years the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals presenting a multifaceted view of cognitive science This volume contains papers posters and summaries of symposia presented at the leading conference that brings cognitive scientists together to discuss issues of theoretical and applied concern Submitted presentations are represented in these proceedings as long papers those presented as spoken presentations and full posters at the conference and short papers those presented as abstract posters by members of the Cognitive Science Society

Processes of Change in Brain and Cognitive Development Yuko Munakata, Mark Johnson, 2006-04-06 This new volume in the highly cited and critically acclaimed Attention and Performance series is the first to provide a systematic investigation of how imaging techniques can help us understand the processes of change in mental development It brings together world class scientists to address brain and cognitive development at several different levels including phylogeny genetics neurophysiology brain imaging behavior and computational modeling across both typically and atypically developing populations
