Causal Models How People Think About The World And Its Alternatives:

Causal Models Steven Sloman, Steven A. Sloman, 2009-04-17 In short this book offers a discussion about how people think talk learn and explain things in causal terms in terms of action and manipulation Jacket **Causal Models** Steven Sloman, 1970 *Causal Models* Steven Sloman, 2005 Sloman offers a conceptual introduction to key mathematical ideas focusing on the intuitions rather than the theorems He tries to show why the ideas are important to understanding how people explain things why it is central to human action to think not only about the world as it is but also about the world as it could be **Causal Models**, 2005 **The Oxford Handbook of Causal Reasoning** Michael Waldmann, 2017 The Oxford Handbook of Causal Reasoning offers a state of the art review of one of our most central cognitive competencies which has for a long time been neglected in cognitive psychology This Handbook provides introductions of competing theories of causal reasoning and discusses its role in various cognitive functions and domains [Causal Cognition in Humans and Machines](#) Andrew Tolmie, Selma Dündar-Coecke, York Hagmayer, 2022-02-02 **The Cost of Conviction** Steven Sloman, 2025-05-20 A timely and important perspective on how people frame decisions and how relying on sacred values unwittingly leads to social polarization When you are faced with a decision do you consider the best outcome or do you consider your deepest values about which actions are appropriate The Cost of Conviction contrasts these two primary strategies for making decisions consequentialism or prioritizing one's sacred values Steven Sloman argues that while both modes of decision making are necessary tools for a good decision maker people err by deploying sacred values more often than they should especially when it comes to sociopolitical issues As a result we oversimplify grow disgusted and angry and act in ways that contribute to social polarization In this book Sloman provides a new understanding of today's societal ills and grounds that understanding in science Drawing on historical and current examples of the two decision making strategies in action the author provides a thorough overview of the psychology of decision making including work on judgment conscious and unconscious decision making processes the roles of emotion and even an analysis of habit and addiction With its unique emphasis on sacred values The Cost of Conviction is an eye opening must read for all decision makers especially those who wish to understand judgment social decision making and leadership **Encyclopedia of the Sciences of Learning** Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i.e. how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories

Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The Encyclopedia of the Sciences of Learning provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences

Bayesian Rationality Mike Oaksford, Nick Chater, 2007 For almost 2 500 years the Western concept of what is to be human has been dominated by the idea that the mind is the seat of reason humans are almost by definition the rational animal In this text a more radical suggestion for explaining these puzzling aspects of human reasoning is put forward

American Book Publishing Record, 2003 *Philosophy and the Empirical* Peter A. French, Howard K.

Wettstein, 2007-11-27 This collection of essays focuses on a current issue of central importance in contemporary philosophy the relationship between philosophy and empirical studies Explores in detail a range of examples which demonstrate how the older paradigm philosophy as conceptual analysis is giving way to a more varied set of models of philosophical work Each of the featured papers is a previously unpublished contribution by a major scholar
