It is well known that successful second language (L2) learners are motivated individuals. Accordingly, L2 researchers have tested the predictive power of different motivational constructs on language learning outcomes. However, this perspective appears to neglect the assessment of achievement as a predictor of future motivation. To assess this possibility, we first employed the latent growth curve model (LGCM) to evaluate the initial values and growth rates of the two variables. We further applied a newly developed statistical method, the random-intercept cross-lagged panel model (RI-CLPM), to study the causal relationship. A total of 226 language students were monitored for 17 weeks at three time points. The analysis showed an increasing trend in the association between the growth levels of both variables. However, students' autonomous motivation at Time 1 appears to affect achievement at Time 2. Further, the second wave of the RI-CLPM illustrated that achievement at Time 2 impacted autonomous motivation at Time 3, while motivation failed to predict scores on achievement at Time 3.

INTRODUCTION

Motivation is one of the key factors that determine the efficiency of L2 learning. This factor has been acknowledged to be a prerequisite that provides the primary impetus to initiate L2 learning and, subsequently, the driving force necessary to sustain the long-term goals of language learning (Dörnyei 1998; Dörnyei and Ryan 2015; Dörnyei and Ushioda 2021). In such a long and tedious process, motivation has been found to determine the extent to which students are actively engaged in L2 learning (Noels et al. 2019; Alamer 2022c), persistence, and resilience in language learning (Kim et al. 2017; Alamer 2021b), and, most importantly, succeed in L2 learning (Alamer 2022a; Elahi Shrivani and Alamer 2022).
