Fascination of Fluid Dynamics Arie Biesheuvel, Gert Jan F. van Heijst, 2012-12-06 In Fascination of Fluid Dynamics contains a collection of papers by international experts in hydrodynamics based on oral presentations at a symposium held in honour of Professor Leen van Wijngaarden on his 65th birthday The book begins with a personal sketch of his life and scientific career It continues with a mixture of papers that address recent developments in various branches of fluid mechanics Many of the papers cover different aspects of multiphase flows bubble dynamics cavitation bubbles and particles in turbulent flows suspension flows and wave phenomena in fluidised beds Other topics that are addressed include dynamics of jets shock waves MHD turbulence selforganisation phenomena in 2D turbulence vortex rings and the thermodynamics of tropical cyclones This edited volume will be valuable reading for researchers engineers and students interested in hydrodynamics and in particular in multiphase flows Liquid Metal Processing I.G. Brodova, P.S. Popel, G.I. Eskin, 2001-10-04 The title presents

an up to date account of the research development and applications of metallic alloys recent research into the structure of charge materials melt treatment and casting technologies and their influence on the properties of melts and ingots This research has confirmed theoretical concepts about the microheterogeneous constitution of metallic melts and has made it possible to manage the quality of castings and ingots of various alloys by their special treatment in the liquid state The four chapters of the book give theoretical and experimental evidence of the effect of the melt constitution on the structure and properties of the solid metal Liquid Metal Processing Applications to Aluminium Alloy Production considers common features of structure formation in aluminium alloys for a wide range of solidification conditions including ultrasonic and thermal melt treatments and discusses the technological problems of these treatments Shock Wave Science and Technology Reference Library, Vol. 1 Rini van Dongen, 2007-04-08 This book offers a timely reference on shock waves in multiphase flows including

new viewpoints and burgeoning developments This volume treats shock and expansion waves in complex bubbly liquids and cryogenic liquids It also examines the relationship of shock waves with phase transitions and induced phase transitions as well as their interaction with solid foams textiles porous and granular media **Fluid Mechanics and Hydraulic**
