Cauchy Problem For Solutions Of Elliptic Equations:

The Cauchy Problem for Solutions of Elliptic Equations Nikolai N. Tarkhanov, 1995-05-23 The book is an attempt to bring together various topics in partial differential equations related to the Cauchy problem for solutions of an elliptic equation Ever since Hadamard the Cauchy problem for solutions of elliptic equations has been known to be ill posed It is conditionally stable just as is the case for even the simplest problems of analytic continuation of functions given on a subset of the boundary Such problems of analytic continuation served as a paradigm for the treatment here The study of the Cauchy problem is carried out in three directions determining the degree of instability which is connected with sharp theorems on approximation by solutions of an elliptic equation finding solvability conditions which is based on the development of Hilbert space methods in the Cauchy problem and reconstructing solutions via their Cauchy data which requires efficient ways of approximation A wide range of topics is touched upon among them are function spaces on compact sets boundedness theorems for pseudodifferential operators in nonlocal spaces nonlinear capacity and removable singularities fundamental solutions capacity criteria for approximation by solutions of elliptic equations and weak boundary values of the solutions The theory applies as well to the Cauchy problem for solution of overdetermined elliptic systems The Cauchy Problem for Solutions of Elliptic Equations Nikolai Nikolaevich Tarkhanov, 1995 The book is an attempt to bring together various topics in partial differential equations related to the Cauchy problem for solutions of an elliptic equation Ever since Hadamard the Cauchy problem for solutions of elliptic equations has been known to be ill posed *Analysis of the Robin-Dirichlet iterative procedure for solving the Cauchy problem for elliptic equations with extension to unbounded domains* Pauline Achieng, 2020-10-26 In this thesis we study the Cauchy problem for elliptic equations It arises in many areas of application in science and engineering as a problem of reconstruction of solutions to elliptic equations in a domain from boundary measurements taken on a part of the boundary of this domain The Cauchy problem for elliptic equations is known to be ill posed We use an iterative regularization method based on alternatively solving a sequence of well posed mixed boundary value problems for the same elliptic equation This method based on iterations between Dirichlet Neumann and Neumann Dirichlet mixed boundary value problems was first proposed by Kozlov and Maz'ya [13] for Laplace equation and Lamé system but not Helmholtz type equations As a result different modifications of this original regularization method have been proposed in literature We consider the Robin Dirichlet iterative method proposed by Mpunganzima et al [3] for the Cauchy problem for the Helmholtz equation in bounded domains We demonstrate that the Robin Dirichlet iterative procedure is convergent for second order elliptic equations with variable coefficients provided the parameter in the Robin condition is appropriately chosen We further investigate the convergence of the Robin Dirichlet iterative procedure for the Cauchy problem for the Helmholtz equation in an unbounded domain We derive and analyse the necessary conditions needed for the convergence of the procedure In the numerical experiments the precise behaviour of the procedure for different values of

k_2 in the Helmholtz equation is investigated and the results show that the speed of convergence depends on the choice of the Robin parameters 0 and 1 . In the unbounded domain case the numerical experiments demonstrate that the procedure is convergent provided that the domain is truncated appropriately and the Robin parameters 0 and 1 are also chosen appropriately. *Pointwise Bounds for Solutions of the Cauchy Problem for Elliptic Equations* George Norman Trytten, 1962. An analysis is presented which deals with a technique for approximating the solution to a Cauchy problem for a general second order elliptic partial differential equation defined in an N dimensional region D . The method is based upon the determination of an a priori bound for the value of an arbitrary function u at a point P in D in terms of the values of u and its gradient on the Cauchy surface and a FUNCTIONAL OF THE ELLIPTIC OPERATOR APPLIED TO U . Author The Analysis of Solutions of Elliptic Equations Nikolai Tarkhanov, 1997-04-30. This book is intended as a continuation of my book *Parametrix Method in the Theory of Differential Complexes* see 291. There we considered complexes of differential operators between sections of vector bundles and we strived more than for details. Although there are many applications to for maximal generality overdetermined systems such an approach left me with a certain feeling of dissatisfaction especially since a large number of interesting consequences can be obtained without a great effort. The present book is conceived as an attempt to shed some light on these new applications. We consider as a rule differential operators having a simple structure on open subsets of R^n . Currently this area is not being investigated very actively possibly because it is already very highly developed actively cf for example the book of Palamodov 213. However even in this well studied situation the general ideas from 291 allow us to obtain new results in the qualitative theory of differential equations and frequently in definitive form. The greater part of the material presented is related to applications of the Laurent series for a solution of a system of differential equations which is a convenient way of writing the Green formula. The culminating application is an analog of the theorem of Vitushkin 303 for uniform and mean approximation by solutions of an elliptic system. Somewhat afield are several questions on ill posedness but the parametrix method enables us to obtain here a series of hitherto unknown facts. **Nonclassical and Inverse Problems for Pseudoparabolic Equations** A. This is the second volume of *Nonlinear Equations with Small Parameter* containing new methods of construction of global asymptotics of solutions to nonlinear equations with small parameter. They allow one to match asymptotics of various properties with each other in transition regions and to get unified formulas for connection of characteristic parameters of approximate solutions. This approach underlies modern asymptotic methods and gives a deep insight into crucial nonlinear phenomena. These are beginnings of chaos in dynamical systems incipient solitary and shock waves oscillatory processes in crystals engineering

MacCamy, 1958 An investigation is made of the representation of solutions of the axially symmetric elliptic equations The representations are derived by exploiting the connection between such equations and singular initial value problems for hyperbolic equations The result is a correspondence between solutions of the elliptic equations and functions of a complex variable Certain boundary value problems for the elliptic equations are solved explicitly or semi explicitly with the aid of these representations **Some Classes of Partial Differential Equations** Andrei Vasil'evich Bitsadze, 1988 A systematic examination of classical and non classical problems for linear partial differential equations and systems of elliptic hyperbolic and mixed types Among a number of difficult problems addressed are the Dirichlet and oblique derivative problems for non uniformly elliptic equations and non strongly elliptic systems and the Cauchy and Darloux problems for non strongly hyperbolic systems and hyperbolic equations with parabolic degeneracy on the boundary Written at a level suitable for undergraduate and graduate students and researchers Individual price 89 Annotation copyrighted by Book News Inc Portland OR **Proceedings of the Summer Seminar, Boulder, Colorado, 1957: Partial differential equations, by L.
