**Advanced Research Methodology: Methods And Techniques** Dr. S. Parvathy, Dr. M. Umayavalli, Dr. P. Ramu, Mrs. V. Manjula, 2023-07-28 The researcher s inner world is formed by his or her choice of research

methodology which considers the nature of the study and the researcher's philosophy, time frame and other contextual factors. Furthermore, the research methodology works as the central nervous system since it limits the scope of the investigation and because proper research work necessitates that both the internal and exterior surroundings adhere to the correct research methodology procedure. Research methodologies refer to the procedures used to assemble information for studies. The data might be used for theoretical or applied studies such as the strategic conceptualization of management research, operational planning methodologies and change management. Most of your work will be done when you complete the data analysis. However, before you start, you need to consider specific crucial issues in research technique such as the validity of research data, ethics and dependability. After this comes the research plan which might be either purely experimental or include some elements of experimentation. The last two steps are analyzing the data and producing the research report. The data is meticulously sorted into graphs, tables and only the most relevant information is presented. A researcher must develop a research approach appropriate to the study's subject matter. It is essential to remember that even if two topics need the same study approach, the research technique might differ.

**Computational Engineering of Historical Memories** Andrea Nanetti, 2022-09-26. Nanetti outlines a methodology for deploying artificial intelligence and machine learning to enhance historical research. Historical events are the treasure of human experiences, the heritage that societies have used to remain resilient and express their identities. Nanetti has created and developed an interdisciplinary methodology supported by practice-based research that serves as a pathway between historical and computer sciences to design and build computational structures that analyse how societies create narratives about historical events. This consilience pathway aims to make historical memory machine understandable. It turns history into a computational discipline through an interdisciplinary blend of philological accuracy, historical scholarship, history-based media projects and computational tools. Nanetti presents the theory behind this methodology from a humanities perspective and discusses its practical application in user interface and experience. An essential read for historians and scholars working in the digital humanities.

**The Digital War** Winston Ma, 2021-01-19. What new directions in China's digital economy mean for us all. China is the largest homogenous digital market on Earth, unified by language, culture and mobile payments. Not only a consumer market of unrivaled size, it's also a vast and hyperactive innovation ecosystem for new technologies. And as China's digital economy moves from a consumer-focused phase to an enterprise-oriented one, Chinese companies are rushing to capitalize on ways the newer wave of tech: the Internet of Things, AI, blockchain, cloud computing and data analytics (IABCD) can unlock value for their businesses from non-traditional angles. In *The Digital War*, Winston Ma, investment professional, capital markets attorney, adjunct professor of digital economy and bestselling author, details the profound global implications of this new direction, including how Chinese apps for services such as food delivery expand so quickly they surpass their U.S. models within a couple of years and how the sheer scale and pace of Chinese innovation might lead to an AI arms race in
