Elucidating the Determinants Between the Environment and Individuals' Behaviors Amidst the COVID-19 Pandemic and the Post-COVID Era Ayesha Mumtaz, Ondrej Holy , Erum Rehman, 2025-02-07 Individuals behavior is considered to be impacted by the environment and molded by the interaction of certain environmental parameters and fundamental human traits The COVID 19 epidemic had caused

behavioral alterations However the impact of environmental characteristics such as social culture neighborhood and household and related interconnections with both personal and demographic traits such as biological sex age personality and health concerns has received relatively minimal attention As the epidemic subsides such transformed patterns may endure or revert to former patterns with variations between population subgroups such as the general population patients teenagers expectant mothers and the elderly The existence or absence of multiple environmental parameters may influence the disparity Recognizing these multiplex interactions between the environmental behavioral patterns and individuals may enable our societies readiness for the post pandemic phase This research topic intends to shed light on the interactions between individual traits and environmental parameters with a spectrum of pandemic influenced behaviors Certain health improving behaviors including social connection and physical exercise may have decreased throughout the epidemic environment while others may have expanded such as sedentary behaviors screen time and social media use Particular environmental characteristics that were recognized as enhancers or barriers of specific behaviors before the COVID 19 outbreak may persist to interact throughout and after the epidemic These investigations are critical for comprehending the overarching effect of the environment on individuals behavior Individual preferences may also influence pandemic induced behaviors which are influenced by an individual s societal setting It would be possible to design communities and territories that encourage a healthy lifestyle while also being more resistant to epidemics of infectious diseases that may occur more frequently in the coming decades as a consequence of climatic transformation and urban development by conducting investigations on such behaviors thereby providing evidence on how the interactions between individuals and the environment influence multiple health related behaviors
