task **Taking Note** Brenda Miller Power, 1996 Teachers need to be keen observers and notetakers as they assess how students learn This practical guide will show readers how to dig their way through the mountain of paperwork before them and how to begin to keep thoughtful records of student learning In a breezy down to earth style Brenda Power invites you to try new notetaking strategies and shows you how developing this modest skill can help you organize your work and make you more efficient In dozens of examples from teachers at all grade levels Brenda offers helpful suggestions and strategies for everyone from the first year teacher to the veteran classroom researcher She takes you step by step through the process of examining existing notes breaking old habits managing time and materials so observations are possible and coding notes for later use in assessment and research Totally practical every chapter in Taking Note is packed with ideas and techniques you can use to become a cogent skillful and accurate notetaker The Tools of the Trade Don't get buried in scraps of paper There are all kinds of inexpensive stationery items that are just right for the job so you start off organized and stay organized When to Write All about time finding it controlling it and saving some for yourself What to Write You don't have to write down everything you observe These hints will help you tell what's important and what's not Bringing It All Together These case studies show you how two teachers developed their notetaking skills in very different settings From Step by Step to a Dance Try these ideas to set up and finance an inservice program to build a network of expert notetakers Taking Note is a boon to any teacher and especially appropriate as a supplement to graduate or inservice courses in alternative assessment and teacher research How To Take Good Notes Angelos Georgakakis, 2017-06-25 Why would I need a book on how to take notes Notes are just notes FALSE Scientists have found that note taking can be as mentally demanding as playing chess can be for an expert While you take notes you listen carefully to the lecturer you process the new material you organize it in your working memory and you finally write down what you think is most important All this happens while someone is talking at an average speed of three words per second and someone is writing down at an average speed of one third of a word per second It doesn't sound easy now does it Notes are an important tool for learning We don't take notes just to record a few facts so we can review them later Learning happens as we take notes Taking notes the right way leads to good study practices better performance on exams and long term retention of information Note taking comes naturally FALSE Note taking is not obvious or intuitive Research has shown that students fail to capture 40% of the main points in a typical lecture First year students capture only 11% In some studies even the best note takers seem to record less than 75% of the important information People think they take good notes until they're told they don't Few of us have consciously thought about how we take notes let alone how to improve the quality of them We often reproduce the lecturer's phrases verbatim We don't save time by systematic use of abbreviations We fail to become a good psychologist of our lecturer We fail to pick up his enthusiasm We fail to interpret the tone of his voice We fail to read his body language And the result is that we fail to take good notes Anyway no one taught me how to take notes in school or in college TRUE Educators believe that students are able to assess

the quality of their notes and follow good practices However studies have shown the exact opposite The fact that there isn't a course in college dedicated to the art of taking notes or learning in general makes students believe that this is a natural skill that they can perfect with practice over the course of their studies At the end of the day everyone has their own way to take notes TRUE In this book you may be surprised to learn that I don't make any references to different types of note taking systems like those that other books do The reason is that it's the practices behind the note taking that matter most For example you should not copy the lecturer's phrases word for word but generate the main points in your own words And you should leave space on your notes for adding comments and testing yourself later I encourage students to use the Cornell note taking system because it utilizes most of the principles of effective note taking No matter which note taking system you decide to follow the cognitive effort you will have to expend is equally high Note taking may not be rocket science but it's definitely science cognitive science And cognitive science has produced a lot of useful insights that we can use now to take better notes This book presents these insights in simple words so you can make the most of your notes and use them to study effectively The title of this book is How to take good notes However note taking is just one part of the picture Note taking is much broader in the context of this book We take notes so we can interact with them later What matters most is what we do with our notes after we finish taking them Notes can do so many good things for you They hold all your learning efforts Treat them well Look after them
