HSF1 and Molecular Chaperones in Biology and Cancer Marc Laurence Mendillo, David Pincus, Ruth Scherz-Shouval, 2020-04-15 Protein homeostasis or Proteostasis lies at the heart of human health and disease From the folding of single polypeptide chains into functional proteins to the regulation of intracellular signaling pathways to the secreted signals that coordinate cells in tissues and throughout the body the proteostasis network operates to support cell health and physiological fitness However cancer cells also hijack the proteostasis network and many of these same processes to sustain the growth and spread of tumors The chapters in this book are written by world experts in the many facets of the proteostasis network They describe cutting edge insights into the structure and function of the major chaperone and degradation systems in healthy cells and how these systems are co-opted in cancer cells and the cells of the tumor microenvironment The chapters also cover therapeutic interventions such as the FDA approved proteasome inhibitors Velcade and Kypolis as well as other therapies currently under clinical investigation to disarm the ability of the proteostasis network to support malignancy This compendium is the first of its kind and aims to serve as a reference manual for active investigators and a primer for newcomers to the field This book is dedicated to the memory of Susan Lindquist a pioneer of the proteostasis field and a champion of the power of basic scientific inquiry to unlock the mechanisms of human disease The chapter Reflections and Outlook on Targeting HSP90 HSP70 and HSF1 in Cancer A Personal Perspective is available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](https://www.springer.com) *Multidisciplinary Research Area in Arts, Science & Commerce (Volume-3)* Chief Editor- Biplab Auddya, Editor- Nazia Qureshi, Dr. Ratnaprava Parija, Dr. R.
