International Handbook of Migration, Minorities and Education Zvi Bekerman, Thomas Geisen, 2011-10-06 Migrants and minorities are always at risk of being caught in essentialized cultural definitions and being denied the right to express their cultural preferences because they are perceived as threats to social cohesion. Migrants and minorities respond to these difficulties in multiple ways as active agents in the pedagogical, political,

social and scientific processes that position them in this or that cultural sphere On the one hand they reject ascribed cultural attributes while striving towards integration in a variety of social spheres e g school and workplace in order to achieve social mobility On the other hand they articulate demands for cultural self determination This discursive duality is met with suspicion by the majority culture For societies with high levels of migration or with substantial minority cultures questions related to the meaning of cultural heterogeneity and the social and cultural limits of learning and communication e g migration education or critical multiculturalism are very important It is precisely here where the chances for new beginnings and new trials become of great importance for educational theorizing which urgently needs to find answers to current questions about individual freedom community cultural affiliations and social and democratic cohesion Answers to these questions must account for both political and learning perspectives at the macro mezzo and micro contextual levels The contributions of this edited volume enhance the knowledge in the field of migrant minority education with a special emphasis on the meaning of culture and social learning for educational processes

Law and the Modern Mind Jerome Frank, Brian H. Bix, 2017-07-12 Law and the Modern Mind first appeared in 1930 when in the words of Judge Charles E Clark it fell like a bomb on the legal world In the generations since its influence has grown today it is accepted as a classic of general jurisprudence The work is a bold and persuasive attack on the delusion that the law is a bastion of predictable and logical action Jerome Frank's controversial thesis is that the decisions made by judge and jury are determined to an enormous extent by powerful concealed and highly idiosyncratic psychological prejudices that these decision makers bring to the courtroom

The Evolution of Chemical Knowledge Jürgen Jost, Guillermo Restrepo, 2022-10-05 Chemistry shapes and creates the disposition of the world's resources and provides novel substances for the welfare and hazard of our civilisation at an exponential rate Can we model the evolution of chemical knowledge This book not only provides a positive answer to the question it provides the formal models and available data to model chemical knowledge as a complex dynamical system based on the mutual interaction of the social semiotic and material systems of chemistry These systems

which have evolved over the history include the scientists and institutions supporting chemical knowledge social system theories concepts and forms of communication semiotic system and the substances reactions and technologies material system central for the chemical practice These three systems which have traditionally been mostly studied in isolation are brought together in this book in a grand historical narrative on the basis of comprehensive data sets and supplemented by appropriate tools for their formal analysis We thereby develop a comprehensive picture of the evolution of chemistry needed for better understanding the past present and future of chemistry as a discipline The interdisciplinary character of this book and its non technical language make it an ideal complement to more traditional material in undergraduate and graduate courses in chemistry history of science and digital humanities

Exploring More Signature Pedagogies Nancy L. Chick,Aeron Haynie,Regan A. R. Gurung,2023-07-03 What is distinctive about the ways specific disciplines are traditionally taught and what kinds of learning do they promote Do they inspire the habits of the discipline itself or do they inadvertently contradict or ignore those disciplines By analyzing assumptions about often unexamined teaching practices their history and relevance in contemporary learning contexts this book offers teachers a fresh way to both think about their impact on students and explore more effective ways to engage students in authentic habits and practices This companion volume to Exploring Signature Pedagogies covers disciplines not addressed in the earlier volume and further expands the scope of inquiry by interrogating the teaching methods in interdisciplinary fields and a number of professions critically returning to Lee S Shulman s origins of the concept of signature pedagogies This volume also differs from the first by including authors from across the United States as well as Ireland and Australia The first section examines the signature pedagogies in the humanities and fine arts fields of philosophy foreign language instruction communication art and design and arts entrepreneurship The second section describes signature pedagogies in the social and natural sciences political science economics and chemistry Section three highlights the interdisciplinary fields of Ignatian pedagogy women s studies and disability studies and the book concludes with four chapters on professional pedagogies nursing occupational therapy social work and teacher education that illustrate how these pedagogies change as the social context changes as their knowledge base expands or as online delivery of instruction
