

The background of the cover features several stylized, light green chromosome illustrations. These are depicted as X-shaped structures with varying degrees of condensation and some internal banding patterns, scattered across the dark green background. The chromosomes are oriented in different directions, some horizontally and some diagonally.

Chemical Mutagens Principles Methods For Their Detection Vol 1:

Chemical Mutagens Alexander Hollaender, 2012-12-06 As editor I want especially to thank Dr Ernst Freese for helpful co operation in preparing these volumes and to express my appreciatlOn to Drs Kurt Hirschhorn and Marvin Legator the other members of the editorial board Alexander Hollaender January 1971 Preface The purpose of these volumes is to encourage the development and ap plication of testing and monitoring procedures to avert significant human exposure to mutagenic agents The need for protection against exposure to possibly mutagenic chemicals is only now coming to be generally realized The recently issued Report of the Secretary s Commission on Pesticides and Their Possible Effects on Health the Mrak Report U S Department of Health Education and Welfare December 1969 has made an important start Its Panel on Mutagenicity recommends that all currently used pesticides be tested for mutagenicity in several recently developed and relatively simple systems Whether recommendations such as these are actually put into effect will depend on convincing government industry and the public that the problem is important that the proposed tests would be effective and that they can be conducted at a cost that is not prohibitive Why is it important to screen environmental agents for mutagenic activity To those who will read this book the answer is self evident The sine qua non of all that we value and all that we are is our genetic heritage

Chemical Mutagens Alexander Hollaender, 1971-01-04 The best protection against environmental mutagens is to identify them before they ever come into general use But it is always possible that some substance will escape detection and affect a large number of persons without this being realized until later generations This article considers ways in which such a genetic emergency might be promptly detected A mutation detecting system should be relevant in that it tests for effects that are as closely related as possible to those that are feared It should be sensitive enough to detect a moderate increase in mutation rate able to discover the increase promptly before more damage is done responsive to various kinds of mutational events and designed in such a way as to maxi mize the probability that the Gause of an increase can be found Methods based on germinal mutation necessarily involve enormous numbers of persons and tests On the other hand with somatic mutations the individual cell becomes the unit of measurement rather than the in dividual person For this reason I think that somatic tests are preferable to germinal tests despite the fact that it is germinal mutations which are feared
