Compiled Labelled Deductive Systems

Lei Huang

Compiled Labelled Deductive Systems:

Compiled Labelled Deductive Systems Krysia Broda, 2004 This book introduces a general framework called Compiled Labelled Deductive System CLDS for a unified presentation of logics It shows how this technique is applied to various families of non classical logics widely used in Computer Science and Artificial Intelligence It includes complete natural deduction proof systems together with proofs and examples for the families of propositional and predicate modal logics propositional conditional logics of normality multiplicative linear logic and for Lukasiewicz fuzzy logic The CLDS framework generalises the notion of a logical theory to a structured theory consisting of labelled formulas and relations between the labels This formalisation makes the logics more amenable to applications Moreover the framework provides a semantic approach based on a first order translation which can be uniformly applied to any logic whose semantics is first order axiomatisable Such a semantic approach also facilitates the development of automated theorem provers for non classical logics

Labelled Deductive Systems Dov M. Gabbay, 2023 This work introduces a new unifying framework for logics which makes it particularly suitable for applications It develops its general theory and illustrates it with applications in logic computer science artificial intelligence and philosophy

Labelled Deduction David Basin, M. D'Agostino, Dov M. Gabbay, Seán Matthews, Luca Viganò, 2012-12-06 Labelled deduction is an approach to providing frameworks for presenting and using different logics in a uniform and natural way by enriching the language of a logic with additional information of a semantic proof theoretical nature Labelled deduction systems often possess attractive properties such as modularity in the way that families of related logics are presented parameterised proofs of metatheoretic properties and ease of mechanisability It is thus not surprising that labelled deduction has been applied to problems in computer science AI mathematical logic cognitive science philosophy and computational linguistics for example formalizing and reasoning about dynamic state oriented properties such as knowledge belief time space and resources

Labelled Non-Classical Logics Luca Viganò, 2013-04-17 I am very happy to have this opportunity to introduce Luca Viganò's book on Labelled Non Classical Logics I put forward the methodology of labelled deductive systems to the participants of Logic Colloquium 90 Labelled Deductive systems a Position Paper In J Oikkonen and J Vaananen editors Logic Colloquium 90 Volume 2 of Lecture Notes in Logic pages 66-68 Springer Berlin 1993 in an attempt to bring labelling as a recognised and significant component of our logic culture It was a response to earlier isolated uses of labels by various distinguished authors as a means to achieve local proof theoretic goals Labelling was used in many different areas such as resource labelling in relevance logics prefix tableaux in modal logics annotated logic programs in logic programming proof tracing in truth maintenance systems and various side annotations in higher order proof theory arithmetic and analysis This widespread local use of labels was an indication of an underlying logical pattern namely the simultaneous side by side manipulation of several kinds of logical information It was clear that there was a need to establish the labelled deductive systems methodology Modal logic is one major area where

labelling can be developed quickly and systematically with a view of demonstrating its power and significant advantage In modal logic the labels can play a double role

Automated Reasoning with Analytic Tableaux and Related Methods Neil V. Murray, 2003-07-31 This book constitutes the refereed proceedings of the International Conference on Analytic Tableaux and Related Methods TABLEUX 99 held in Saratoga Springs NY USA in June 1999 The volume presents 18 revised full papers and three system descriptions selected from 41 submissions Also included are system comparisons and abstracts of an invited paper and of two tutorials All current issues surrounding mechanization of reasoning with tableaux and similar methods are addressed ranging from theoretical foundations to implementation and systems development and applications as well as covering a broad variety of logic calculi As application areas formal verification of software and computer systems deductive databases knowledge representation and systems diagnosis are covered

Computational Logic: Logic Programming and Beyond Antonis C. Kakas, Fariba Sadri, 2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its raison d'être The diversity of interests covered here reflects the variety of Bob's concerns Read on It is an intellectual feast Before you begin permit me to send him a brief personal but public message Bob how right you were and how wrong I was I should explain When Bob arrived in Edinburgh in 1967 resolution was as yet fairly new having taken several years to become at all widely known Research groups to investigate various aspects of resolution sprang up at several institutions the one organized by Bernard Meltzer at Edinburgh University being among the first For the half dozen years that Bob was a leading member of Bernard's group I was a frequent visitor to it and I saw a lot of him We had many discussions about logic computation and language
