Complementarity: Applications, Algorithms and Extensions Michael C. Ferris,Olvi L. Mangasarian,Jong-Shi Pang,2001-02-28 This volume presents state of the art complementarity applications algorithms extensions and theory in the form of eighteen papers These at the International Conference on Com invited papers were presented plementarity 99 ICCP99 held in Madison Wisconsin during June 9 12 1999 with support from the National Science Foundation under Grant DMS 9970102 Complementarity is becoming more widely used in a variety of appli cation areas In this volume there are papers studying the impact of complementarity in such diverse fields as deregulation of electricity mar kets engineering mechanics optimal control and asset pricing Further more application of complementarity and optimization ideas to related problems in the burgeoning fields of machine learning and data mining are also covered in a series of three articles In order to effectively process the complementarity problems that arise in such applications various algorithmic theoretical and computational extensions are covered in this volume Nonsmooth analysis has an im portant role to play in this area as can be seen from articles using these tools to develop Newton and path following methods for constrained nonlinear systems and complementarity problems Convergence issues are covered in the context of active set methods global algorithms for pseudomonotone variational inequalities successive convex relaxation and proximal point algorithms Theoretical contributions to the connectedness of solution sets and constraint qualifications in the growing area of mathematical programs with equilibrium constraints are also presented A relaxation approach is given for solving such problems Finally computational issues related to preprocessing mixed complementarity problems are addressed <u>Variational Analysis and Applications</u> Franco Giannessi,Antonino Maugeri,2007-03-06 This Volume contains the refereed papers presented at the 38th Conference of the School of Mathematics G Stampacchia of the E Majorana Centre for Scientific Culture of Erice Sicily held in Memory ofG Stampacchia and J L Lions in the period June 20 July 2003 The presence of participants from Countries has greatly contributed to the success of the meeting The School of Mathematics was dedicated to Stampacchia not only for his great mathematical achievements but also because He founded it The core of the Conference has been the various features of the Variational Analysis and their motivations and applications to concrete problems Variational Analysis encompasses a large area of modem Mathematics such as the classical Calculus of Variations the theories of perturbation approximation subgradient subderivates set convergence and Variational Inequalities and all these topics have been deeply and intensely dealt during the Conference In particular Variational Inequalities which have been initiated by Stampacchia inspired by Signorini Problem and the related work of G Fichera have offered a very great possibility of applications to several fundamental problems of Mathematical Physics Engineering Statistics and Economics The pioneer work of Stampacchia and Lions can be considered as the basic kernel around which Variational Analysis is going to be outlined and constructed The Conference has dealt with both finite and infinite dimensional analysis showing that to carry on these two aspects disjointly is
