Differentiable Operators And Nonlinear Equations Operator Theory Advances And Applications:

Differentiable Operators and Nonlinear Equations Victor Khatskevich, David Shoiykhmet, 2012-12-06 The need to study holomorphic mappings in infinite dimensional spaces in all likelihood arose for the first time in connection with the development of nonlinear analysis A systematic study of integral equations with an analytic nonlinear part was started at the end of the 19th and the beginning of the 20th centuries by A Liapunov E Schmidt A Nekrasov and others Their research work was directed towards the theory of nonlinear waves and used mainly the undetermined coefficients and the majorant power series methods which subsequently have been refined and developed Parallel with these achievements the theory of functions of one or several complex variables was gradually enriched with more significant and subtle results The present book is a first step towards establishing a bridge between nonlinear analysis nonlinear operator equations and the theory of holomorphic mappings on Banach spaces The work concludes with a brief exposition of the theory of spaces with indefinite metrics and some relevant applications of the holomorphic mappings theory in this setting In order to make this book accessible not only to specialists but also to students and engineers the authors give a complete account of definitions and proofs and also present relevant prerequisites from functional analysis and topology Contents Preliminaries Differential calculus in normed spaces Integration in normed spaces Holomorphic analytic operators and vector functions on complex Banach spaces Linear operators Nonlinear equations with differentiable operators Nonlinear equations with holomorphic operators Banach manifolds Non regular solutions of nonlinear equations Operators on spaces with indefinite metric References List of Symbols Subject Index *Operator Methods in Ordinary and Partial Differential Equations* Sergio Albeverio, Nils Elander, W. Nirrie Everitt, Pavel Kurasov, 2012-12-06 CO i b H BaCHJIbeBHa IU BaJIeBcR8JI Sonja Kovalevsky was born in Moscow in 1850 and died in Stockholm in 1891 Between these years in the then changing and turbulent circumstances for Europe lies the all too brief life of this remarkable woman This life was lived out within the great European centers of power and learning in Russia France Germany Switzerland England and Sweden To this day now 150 years after her birth her influence for and contribution to mathematics science literature women's rights and democratic government are recorded and reviewed not only in Europe but now in countries far removed in time and distance from the lands of her birth and being This volume dedicated to her memory and to her achievements records the Proceedings of the Marcus Wallenberg Symposium held in memory of Sonja Kovalevsky at Stockholm University from 18 to 22 June 2000 The symposium was held at the Department of Mathematics with its excellent library and lecture halls providing favourable working conditions Within these pages are contained a curriculum vitae for Sonja Kovalevsky a list of all her scientific publications together with a copy of the moving and elegant obituary notice written by her friend and protector Gosta Mittag Leffler These papers are followed by a leading article entitled Sonja Kovalevsky Her life and professorship in Stockholm written especially for this volume by Jan Erik Bjork in preparation for his major address to the Symposium *Orthogonal*

Systems and Convolution Operators Robert Ellis, Israel Gohberg, 2003 The main concern of this book is the distribution of zeros of polynomials that are orthogonal on the unit circle with respect to an indefinite weighted scalar or inner product The first theorem of this type proved by M G Krein was a far reaching generalization of G Szeg's result for the positive definite case A continuous analogue of that theorem was proved by Krein and H Langer These results as well as many generalizations and extensions are thoroughly treated in this book A unifying theme is the general problem of orthogonalization with invertible squares in modules over C algebras Particular modules that are considered in detail include modules of matrices matrix polynomials matrix valued functions linear operators and others One of the central features of this book is the interplay between orthogonal polynomials and their generalizations on the one hand and operator theory especially the theory of Toeplitz matrices and operators and Fredholm and Wiener Hopf operators on the other hand The book is of interest to both engineers and specialists in analysis

Convolution Operators and Factorization of Almost Periodic Matrix Functions Albrecht Böttcher, Yuri I. Karlovich, Ilya M. Spitkovsky, 2012-12-06 Many problems of the engineering sciences physics and mathematics lead to convolution equations and their various modifications Convolution equations on a half line can be studied by having recourse to the methods and results of the theory of Toeplitz and Wiener Hopf operators Convolutions by integrable kernels have continuous symbols and the Cauchy singular integral operator is the most prominent example of a convolution operator with a piecewise continuous symbol The Fredholm theory of Toeplitz and Wiener Hopf operators with continuous and piecewise continuous matrix symbols is well presented in a series of classical and recent monographs Symbols beyond piecewise continuous symbols have discontinuities of oscillating type Such symbols emerge very naturally For example difference operators are nothing but convolution operators with almost periodic symbols the operator defined by A
