## **Differential Equations Computing And Modeling:**

**Differential Equations and Boundary Value Problems** Charles Henry Edwards, David E. Penney, 2000 For introductory courses in Differential Equations This text provides the conceptual development and geometric visualization of a modern differential equations course while maintaining the solid foundation of algebraic techniques that are still essential to science and engineering students It reflects the new excitement in differential equations as the availability of technical computing environments like Maple Mathematica and MATLAB reshape the role and applications of the discipline New technology has motivated a shift in emphasis from traditional manual methods to both qualitative and computer based methods that render accessible a wider range of realistic applications With this in mind the text augments core skills with conceptual perspectives that students will need for the effective use of differential equations in their subsequent work and study
