Digit Serial Computation:

Digit-Serial Computation Richard Hartley, Keshab K. Parhi, 2012-12-06 Digital signal processing DSP is used in a wide range of applications such as speech telephone mobile radio video radar and sonar The sample rate requirements of these applications range from 10 KHz to 100 MHz Real time implementation of these systems requires design of hardware which can process signal samples as these are received from the source as opposed to storing them in buffers and processing them in batch mode Efficient implementation of real time hardware for DSP applications requires study of families of architectures and implementation styles out of which an appropriate architecture can be selected for a specified application To this end the digit serial implementation style is proposed as an appropriate design methodology for cases where bit serial systems cannot meet the sample rate requirements and bit parallel systems require excessive hardware The number of bits processed in a clock cycle is referred to as the digit size The hardware complexity and the achievable sample rate increase with increase in the digit size As special cases a digit serial system is reduced to bit serial or bit parallel when the digit size is selected to equal one or the word length respectively A family of implementations can be obtained by changing the digit size parameter thus permitting an optimal trade off between throughput and size Because of their structured architecture digit serial designs lend themselves to automatic compilation from algorithmic descriptions An implementation of this design methodology the Parsifal silicon compiler was developed at the General Electric Corporate Research and Development laboratory

Computational Science and Its Applications - ICCSA 2004 Antonio Laganà,Marina L. Gavrilova,Vipin Kumar,Youngsong Mun,C.J. Kenneth Tan,Osvaldo Gervasi,2004-04-29 The natural mission of Computational Science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems For this reason Computational Science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity In all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms As a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications interoperable and ubiquitous Numerous examples of ubiquitous and interoperable tools and
