Excavating Mormon Pasts Newell C. Bringham, Lavina Fielding Anderson, 2004-08-31 Winner of the Special Book Award from the John Whitmer Historical Association *Excavating Mormon Pasts* assembles sixteen knowledgeable scholars from both LDS and the Community of Christ traditions who have long participated skillfully in this dialogue It presents their insightful and sometimes incisive surveys of where the New Mormon History has come from and which fields remain unexplored It is both a vital reference work and a stimulating picture of the New Mormon History in the early twenty first century

Mormon Enigma Linda King Newell, Valeen Tippetts Avery, 1994 Winner of the Evans Biography Award the Mormon History Association Best Book Award and the John Whitmer Association RLDS Best Book Award A preface to this first paperback edition of the biography of Emma Hale Smith Joseph Smith's wife reviews the history of the book and its reception Various editorial changes effected in this edition are also discussed back cover

Microbiology and pathogenesis of Chlamydia, Coxiella, and Rickettsia Rey Carabeo, Stacey Gilk, Scot P. Ouellette, Matteo Bonazzi, 2024-07-08 Obligate intracellular parasitism is the associated with genome reduction which is the process of reconfiguring the genome through systematic elimination of genetic loci deemed unnecessary The end result is an increasing dependence on the host for various factors essential for growth such as nutrients and a protective intracellular replicative niche The extreme genome reduction that some of the obligate intracellular bacteria have undergone while maintaining viability and virulence has revealed the level of adaptability including a plethora of survival strategies that more often than not functionally converge to modulate similar host cell processes such as cytoskeletal dynamics vesicular transport and pathogen recognition among others With the advent of molecular genetic approaches and in the case of *Coxiella* growth in axenic media the field of obligate intracellular pathogen research has progressed rapidly in the past five years redefining obligate intracellular parasitism as the field transitions from descriptive to mechanism based research An emerging theme is the adaptability and ingenuity of this class of pathogens Genome reduction prioritizes survival but because this occurs within a host there is also the need to maintain virulence As such survival strategies become intertwined and likely inseparable from virulence strategies The purpose of this Special Topics Issue is to bring together in one volume review articles from experts in the field This issue will have a broad scope Articles will describe the current state of knowledge in genetics and genomics metabolism cell biology of infection immune evasion and vaccine design Importantly cutting edge information will also be discussed in the context of past seminal findings and future directions of research Overall this Special Topics Issue should serve as a valuable reference to colleagues and those new to the field of obligate intracellular pathogens research We welcome submission of review and mini review articles on the following topics Genome structure Development of genetic tools Molecular mechanisms of adhesion invasion and other early events in infection Establishment of the intracellular niche Niche interactions with organelles Translocation of effectors Metabolism and metabolic adaptations Gene regulation during stress

response Pathogen recognition and immune evasion strategies Innate and adaptive immunity during infection Experimental models *Persistent Activity in the Brain - Functions and Origin* Shintaro Funahashi,Emmanuel Procyk,2022-03-07
