Carillo,2025-10-15 The Radical Case for Teaching Skim Reading in First Year Writing encourages faculty particularly in writing studies to check internal biases toward deep reading and teach skim reading in first year writing courses Written by Ellen C Carillo who has previously published on the importance of teaching deep reading this small book is a controversial prompt for further discussion and exploration Data from studies of the lived experiences of undergraduates indicate that students do not need deep reading practices in the majority of their

classes across the disciplines and moreover that students succeed in their classes by skim reading Rather than imagining an idealized set of circumstances that allow for sustained deep reading as does a great deal of the scholarship on reading in writing studies The Radical Case for Teaching Skim Reading in First Year Writing argues for teaching students reading practices that will support their success in their college writing assignments rather than those strategies the field believes should support their success In our information landscape and our fragile democracy encouraging skimming as opposed to deep reading may seem like a gamble this very tendency toward the quick rather than the critical has undoubtedly contributed to the current crisis of mass misinformation However teaching students to use skim reading as a strategic tool for purposeful engagement and efficient yet thoughtful information filtering better equips them to navigate the rapidly changing information landscape and manage the fast paced flow of content from diverse media sources   *Building LLMs with PyTorch* Anand Trivedi ,2025-03-13 DESCRIPTION PyTorch has become the go to framework for building cutting edge large language models LLMs enabling developers to harness the power of deep learning for natural language processing This book serves as your practical guide to navigating the intricacies of PyTorch empowering you to create your own LLMs from the ground up You will begin by mastering PyTorch fundamentals including tensors autograd and model creation before diving into core neural network concepts like gradients loss functions and backpropagation Progressing through regression and image classification with convolutional neural networks you will then explore advanced image processing through object detection and segmentation The book seamlessly transitions into NLP covering RNNs LSTMs and attention mechanisms culminating in the construction of Transformer based LLMs including a practical mini GPT project You will also get a strong understanding of generative models like VAEs and GANs By the end of this book you will possess the technical proficiency to build train and deploy sophisticated LLMs using PyTorch equipping you to contribute to the rapidly evolving landscape of AI WHAT YOU WILL LEARN Build and train PyTorch models for linear and logistic regression Configure PyTorch environments and utilize GPU acceleration with CUDA Construct CNNs for image classification and apply transfer learning techniques Master PyTorch tensors autograd and build fundamental neural networks Utilize SSD and YOLO for object detection and perform image segmentation Develop RNNs and LSTMs for sequence modeling and text generation Implement attention mechanisms and build Transformer based language models Create generative models using VAEs and GANs for diverse applications Build and deploy your own mini GPT language model applying the acquired skills WHO THIS BOOK IS FOR Software engineers AI researchers architects seeking AI insights and professionals in finance medical engineering and mathematics will find this book a comprehensive starting point regardless of prior deep learning expertise TABLE OF CONTENTS 1 Introduction to Deep Learning 2 Nuts and Bolts of AI with PyTorch 3 Introduction to Convolution Neural Network 4 Model Building with Custom Layers and PyTorch 2 0 5 Advances in Computer Vision Transfer Learning and Object Detection 6 Advanced Object Detection and Segmentation 7 Mastering Object Detection with Detectron2 8 Introduction to

RNNs and LSTMs 9 Understanding Text Processing and Generation in Machine Learning 10 Transformers Unleashed 11 Introduction to GANs Building Blocks of Generative Models 12 Conditional GANs Latent Spaces and Diffusion Models 13 PyTorch 2 0 New Features Efficient CUDA Usage and Accelerated Model Training 14 Building Large Language Models from Scratch   <u>Who Wrote This?</u> Naomi S. Baron,2023-09-12 Would you read this book if a computer wrote it Would you even know And why would it matter Today s eerily impressive artificial intelligence writing tools present us with a crucial challenge As writers do we unthinkingly adopt AI s time saving advantages or do we stop to weigh what we gain and lose when heeding its siren call To understand how AI is redefining what it means to write and think linguist and educator Naomi S Baron leads us on a journey connecting the dots between human literacy and today s technology From nineteenth century lessons in composition to mathematician Alan Turing s work creating a machine for deciphering war time messages to contemporary engines like ChatGPT Baron gives readers a spirited overview of the emergence of both literacy and AI and a glimpse of their possible future As the technology becomes increasingly sophisticated and fluent it s tempting to take the easy way out and let AI do the work for us Baron cautions that such efficiency isn t always in our interest As AI plies us with suggestions or full blown text we risk losing not just our technical skills but the power of writing as a springboard for personal reflection and unique expression Funny informed and conversational Who Wrote This urges us as individuals and as communities to make conscious choices about the extent to which we collaborate with AI The technology is here to stay Baron shows us how to work with AI and how to spot where it risks diminishing the valuable cognitive and social benefits of being literate   **The De Gruyter Handbook of Robots in Society and Culture** Leopoldina Fortunati,Autumn Edwards,2024-09-23 The De Gruyter Handbook of Robots in Society and Culture provides a comprehensive discussion of how social robots take form function and meaning for individuals relationships cultures and societies Through a path breaking integration of perspectives coming from sociology communication and media psychology cognitive neuroscience anthropology political science and science and technology studies it focuses on the critical and social meaning of present developments in social robotic technologies This book looks at artificial agents from voice based assistants to humanoid robots as their use transforms private and public contexts and gives rise to both new possibilities and new perils for human being and becoming organizations as well as social structures and institutions The handbook traces the consequences and key problems of social robotics across broad social contexts in both public and political as well as domestic and intimate spaces Further it attends carefully to the implications of social robotics for various human identity groups including those based on gender ethnicity culture class ability and age Deep attention to interdisciplinarity inclusivity ethics and socio cultural futures serves as the guiding inspiration behind each contribution within this handbook   **Managerial Communication** Jennifer R.
