alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate. By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans. There are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning. When making a decision an agent is supposed to maximize the expected utility of its value function. Classically this has been referred to as happiness but this is just one of many things that people value. In order to resolve this issue we need to determine a set of human values that represent humanity's interests. Although this problem might seem intractable, research shows that people of various cultures and religions actually share more in common than they realize. In this book we review world religions, moral philosophy and evolutionary psychology to elucidate a common set of shared values. We then show how these values can be used to address the alignment problem and conclude with problems and goals for future research. The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem. These people will come from various professions and include philosophers, computer programmers and psychologists as the problem itself is multi-disciplinary.

Handbook of Research on Digital Learning Montebello, Matthew, 2019-10-11. Education has gone through numerous radical changes as the digital era has transformed the way we as humans communicate, inform ourselves, purchase goods and perform other mundane chores at home and at work. New and emerging pedagogies have enabled rapid advancements, perhaps too rapidly. It's a challenge for instructors and researchers alike to remain up to date with educational developments and unlock the full potential that technology could have on this significant profession. The *Handbook of Research on Digital Learning* is an essential reference source that explores the different challenges and opportunities that the new and transformative pedagogies have enabled. The challenges will be portrayed through a number of case studies where learners have struggled, managed and adapted digital technologies in their effort to progress educational goals. Opportunities are revealed and displayed in the form of new methodologies, institutions, scenarios and ongoing research that seeks to optimize the use of such a medium to assist the digital learner in the future of networked education. Featuring research on topics such as mobile learning, self-directed learning and cultural considerations, this book is ideally designed for teachers, principals, higher education faculty, deans, curriculum developers, instructional designers, educational software developers, IT specialists, students, researchers and academicians.

Exploring the Ethical Implications of Generative AI Ara, Aftab, 2024-04-04. Generative Artificial Intelligence (AI) an ever-evolving technology holds immense promise across various industries from healthcare to content generation. However, its rapid advancement has also given rise to profound ethical concerns. Illicit black market industries exploit generative AI for counterfeit imagery and in educational settings, biases and misinformation perpetuate. These issues underscore the need to grapple with the risks accompanying generative AI integration. *Exploring the Ethical Implications of Generative AI* emerges as a wellspring of insight for

discerning academic scholars It sets the stage by acknowledging generative AI's multifaceted potential and its capacity to reshape industries The book addresses these complex ethical concerns offering a comprehensive analysis and providing a roadmap for responsible AI development and usage Its intended audience spans business leaders policymakers scholars and individuals passionate about the ethical dimensions of AI
