Stephens, Charles Suscheck, Shobha Rani Dhalipathi, Bo Wang, 2020-01-03 From the beginning of software time people have wondered why it isn't possible to accelerate software projects by simply adding staff This is sometimes known as the nine women can't make a baby in one month problem The most famous treatise declaring this to be impossible is Fred Brooks' 1975 book *The Mythical Man Month* in which he declares that adding more programmers to a late software project makes it later and indeed this has proven largely true over the decades Aided by a domain driven code generator that quickly creates database and API code Parallel Agile PA achieves significant schedule compression using parallelism as many developers as necessary can independently and concurrently develop the scenarios from initial prototype through production code Projects can scale by elastic staffing rather than by stretching schedules for larger development efforts Schedule compression with a large team of developers working in parallel is analogous to hardware acceleration of compute problems using parallel CPUs PA has some similarities with and differences from other Agile approaches Like most Agile methods PA gets to code early and uses feedback from executable software to drive requirements and design PA uses technical prototyping as a risk mitigation strategy to help sanity check requirements for feasibility and to evaluate different technical architectures and technologies Unlike many Agile methods PA does not support design by refactoring and it doesn't drive designs from unit tests Instead PA uses a minimalist UML based design approach Agile ICONIX that starts out with a domain model to facilitate communication across the development team and partitions the system along use case boundaries which enables parallel development Parallel Agile is fully compatible with the Incremental Commitment Spiral Model ICSM which involves concurrent effort of a systems engineering team a development team and a test team working alongside the developers The authors have been researching and refining the PA process for several years on multiple test projects that have involved over 200 developers The book's example project details the design of one of these test projects a crowdsourced traffic safety system
