**Human Ring Chromosomes** Peining Li,Thomas Liehr,2024-03-19 This book presents chromosome wise clinical cases following an evidence based protocol in addition to providing the scientific background on the mechanisms of human ring chromosome RC formation Presence of RCs in a genome can lead to several rare genetic diseases This book edited by the leading experts Prof Peining Li and Prof Thomas Liehr is the first comprehensive book on this topic Over the past 60 years banding cytogenetics fluorescence in situ hybridization chromosome microarray analysis and whole genome sequencing have been used to diagnose cases with a RC Ring syndrome of sever growth retardation and variable intellectual disability has been considered a common clinical feature for all RCs Clinical heterogeneity of chromosome specific deletion and duplication syndromes gene related organ and tissue defects cancer predisposition to different types of tumors and reproduction failure has been reported in the literature However the cases of RCs reported in the literature account for less than 1% of its real occurrence Current diagnostic practice lacks laboratory standards for analyzing cellular behavior and genomic imbalances of RCs to evaluate its compound effects on patients The under representation of clinical cases and the lack of comprehensive diagnostic analysis make challenging to establish accurate clinico cytogenomic correlations Given recent advances in genomic technology and organized efforts from peer experts standardized cytogenomic diagnosis and evidence based clinical management could be envisioned for all patients with RCs Furthermore supernumerary small ring chromosomes and the patient s perspective are addressed the latter by including family stories of RC carrier relatives Acquired RCs in various cancers are also discussed as well as the potential role of RCs in research applications like iPSC cellular modeling and genomic editing This book is a valuable reference for clinical geneticists personnel in cytogenetics and molecular genetics laboratories genetic counselors and researchers in related fields

**Charged Particles in Oncology** Marco Durante,Francis A. Cucinotta,Jay S. Loeffler,2018-01-31 High energy charged particles represent a cutting edge technique in radiation oncology Protons and carbon ions are used in several centers all over the world for the treatment of different solid tumors Typical indications are ocular malignancies tumors of the base of the skull hepatocellular carcinomas and various sarcomas The physical characteristics of the charged particles Bragg peak allow sparing of much more normal tissues than it is possible using conventional X rays and for this reason all

pediatric tumors are considered eligible for protontherapy Ions heavier than protons also display special radiobiological characteristics which make them effective against radioresistant and hypoxic tumors On the other hand protons and ions with high charge Z and energy HZE particles represent a major risk for human space exploration The main late effect of radiation exposure is cancer induction and at the moment the dose limits for astronauts are based on cancer mortality risk The Mars Science Laboratory MSL measured the dose on the route to Mars and on the planet s surface suggesting that a human exploration missions will exceed the radiation risk limits Notwithstanding many studies on carcinogenesis induced by protons and heavy ions the risk uncertainty remains very high In this research topic we aim at gathering the experiences and opinions of scientists dealing with high energy charged particles either for cancer treatment or for space radiation protection Clinical results with protons and heavy ions as well as research in medical physics and pre clinical radiobiology are reported In addition ground based and spaceflight studies on the effects of space radiation are included in this book Particularly relevant for space studies are the clinical results on normal tissue complications and second cancers The eBook nicely demonstrates that particle therapy in oncology and protection of astronauts from space radiation share many common topics and can learn from each other
