**Symmetries of Algebras, Volume 1** Chelsea Walton, 2024-07-08 This is the first volume of a graduate level textbook series in the area of Algebraic Quantum Symmetry The focus of this book series is on how one can do abstract algebra in the setting of monoidal categories It is intended for readers who are familiar with abstract vector spaces groups rings and ideals and the author takes care in introducing categorical concepts from scratch This book series on Symmetries of Algebras is intended to serve as learning books to newcomers to the area of research and a carefully curated list of additional textbooks and articles are featured at the end of each chapter for further exploration There are also numerous exercises throughout the series with close to 200 exercises in Volume 1 alone If you enjoy algebra and are curious about how it fits into a broader context this is for you

**Abstract Algebra** Claudia Menini, Freddy Van Oystaeyen, 2017-11-22 In one exceptional volume Abstract Algebra covers subject matter typically taught over the course of two or three years and offers a self contained presentation detailed definitions and excellent chapter matched exercises to smooth the trajectory of learning algebra from zero to one Field tested through advance use in the ERASMUS educational project in Europe this ambitious comprehensive book includes an original treatment of representation of finite groups that avoids the use of semisimple ring theory and explains sets maps posets lattices and other essentials of the algebraic language Peano s axioms and cardinality groupoids semigroups monoids groups and normal subgroups

**Surveys in Representation Theory of Algebras** Alex Martsinkovsky, Kiyoshi Igusa, Gordana Todorov, 2018-09-12 This volume contains selected expository lectures delivered at the annual Maurice Auslander Distinguished Lectures and International Conference over the last several years Reflecting the diverse landscape of modern representation theory of algebras the selected articles include a quick introduction to silting modules a survey on the first decade of co t structures in triangulated categories a functorial approach to the notion of module a representation theoretic approach to recollements in abelian categories new examples of applications of relative homological algebra connections between Coxeter groups and quiver representations and recent progress on limits of approximation theory

**Quantum Invariants of Knots and 3-Manifolds** Vladimir G. Turaev, 2016-07-11 Due to the strong appeal and wide use of this monograph it is now available in its third revised edition The monograph gives a systematic treatment of 3 dimensional topological quantum field theories TQFTs based on the work of the author with N Reshetikhin and O Viro This subject was inspired by the discovery of the Jones polynomial of knots and the Witten Chern Simons field theory On the algebraic side the study of 3 dimensional TQFTs has been influenced by the theory of braided categories and the theory of quantum groups The book is divided into three parts Part I presents a construction of 3 dimensional TQFTs and 2 dimensional modular functors from so called modular categories This gives a vast class of knot invariants and 3 manifold invariants as well as a class of linear representations of the mapping class groups of surfaces In Part II the technique of  $6j$  symbols is used to define state sum invariants of 3 manifolds Their relation to the TQFTs constructed in Part I is established

via the theory of shadows Part III provides constructions of modular categories based on quantum groups and skein modules of tangles in the 3 space This fundamental contribution to topological quantum field theory is accessible to graduate students in mathematics and physics with knowledge of basic algebra and topology It is an indispensable source for everyone who wishes to enter the forefront of this fascinating area at the borderline of mathematics and physics Contents Invariants of graphs in Euclidean 3 space and of closed 3 manifolds Foundations of topological quantum field theory Three dimensional topological quantum field theory Two dimensional modular functors 6j symbols Simplicial state sums on 3 manifolds Shadows of manifolds and state sums on shadows Constructions of modular categories ,2007 **Glasnik Matematički** ,1985
