**Singular Intersection Homology** Greg Friedman, 2020-09-24 Intersection homology is a version of homology theory that extends Poincaré duality and its applications to stratified spaces such as singular varieties This is the first comprehensive expository book length introduction to intersection homology from the viewpoint of singular and piecewise linear chains Recent breakthroughs have made this approach viable by providing intersection homology and cohomology versions of all the standard tools in the homology tool box making the subject readily accessible to graduate students and researchers in topology as well as researchers from other fields This text includes both new research material and new proofs of previously known results in intersection homology as well as treatments of many classical topics in algebraic and manifold topology Written in a detailed but expository style this book is suitable as an introduction to intersection homology or as a thorough reference *The Theory of Quantaloids* K I Rosenthal, 2014-07-22 This book presents a detailed account of the theory of quantaloids a natural generalization of quantales The basic theory examples and construction are given and particular emphasis is placed on the free quantaloid construction as well as on the perspective provided by enriched categories

**Encyclopedia of Mathematical Physics** Jean-Pierre Francoise, Gregory L. Naber, Tsou Sheung Tsun, 2006-06-20 The Encyclopedia of Mathematical Physics provides a complete resource for researchers students and lecturers with an interest in mathematical physics It enables readers to access basic information on topics peripheral to their own areas to provide a repository of the core information in the area that can be used to refresh the researcher's own memory banks and aid teachers in directing students to entries relevant to their course work The Encyclopedia does contain information that has been distilled organised and presented as a complete reference tool to the user and a landmark to the body of knowledge that

has accumulated in this domain It also is a stimulus for new researchers working in mathematical physics or in areas using the methods originating from work in mathematical physics by providing them with focused high quality background information Editorial Board Jean Pierre Francoise Universit Pierre et Marie Curie Paris France Gregory L Naber Drexel University Philadelphia PA USA Tsou Sheung Tsun University of Oxford UK Also available online via ScienceDirect 2006 featuring extensive browsing searching and internal cross referencing between articles in the work plus dynamic linking to journal articles and abstract databases making navigation flexible and easy For more information pricing options and availability visit [www.info.sciencedirect.com](http://www.info.sciencedirect.com) First comprehensive interdisciplinary coverage Mathematical Physics explained to stimulate new developments and foster new applications of its methods to other fields Written by an international group of experts Contains several undergraduate level introductory articles to facilitate acquisition of new expertis Thematic index and extensive cross referencing to provide easy access and quick search functionality Also available online with active linking

**The Publishers Weekly**, 1972 *Handbook of Categorical Algebra: Volume 3, Sheaf Theory* Francis

Borceux, 2008-04-24 This third volume turns to topos theory and the idea of sheaves The theory of locales is considered first and Grothendieck toposes are introduced Notions of sketchability and accessible categories are discussed and an axiomatic generalization of the category of sheaves is given

**Russian Mathematical Surveys**, 2003 **Classifying Spaces and Classifying Topoi** Izak Moerdijk, 2006-11-14 This monograph presents a new systematic treatment of the relation between classifying topoi and classifying spaces of topological categories Using a new generalized geometric realization which applies to topoi a weak homotopy equivalence is constructed between the classifying space and the classifying topos of any small topological category Topos theory is then applied to give an answer to the question of what structures are classified by classifying spaces The monograph should be accessible to anyone with basic knowledge of algebraic topology sheaf theory and a little topos theory

E. Fiziș, 1982 Handbook of Categorical Algebra: Volume 1, Basic Category Theory Francis Borceux, 1994-08-26 A Handbook of Categorical Algebra in three volumes is a detailed account of everything a mathematician needs to know about category theory Each volume is self contained and is accessible to graduate students with a good background in mathematics Volume 1 is devoted to general concepts After introducing the terminology and proving the fundamental results concerning limits adjoint functors and Kan extensions the categories of fractions are studied in detail special consideration is paid to the case of localizations The remainder of the first volume studies various refinements of the fundamental concepts of category and functor

An Introduction to Intersection Homology Theory, Second Edition Frances Kirwan, Jonathan Woolf, 2006-06-07 Now more that a quarter of a century old intersection homology theory has proven to be a powerful tool in the study of the topology of singular spaces with deep links to many other areas of mathematics including combinatorics differential

equations group representations and number theory Like its predecessor *An Introduction to Intersection Homology Theory* Second Edition introduces the power and beauty of intersection homology explaining the main ideas and omitting or merely sketching the difficult proofs It treats both the basics of the subject and a wide range of applications providing lucid overviews of highly technical areas that make the subject accessible and prepare readers for more advanced work in the area This second edition contains entirely new chapters introducing the theory of Witt spaces perverse sheaves and the combinatorial intersection cohomology of fans Intersection homology is a large and growing subject that touches on many aspects of topology geometry and algebra With its clear explanations of the main ideas this book builds the confidence needed to tackle more specialist technical texts and provides a framework within which to place them **Bulletin**

**Quasi-abelian Categories and Sheaves** Jean-Pierre Schneiders, 1999 This memoir is divided in three parts in the first one we introduce the notion of quasi abelian category and link the homological algebra of these categories to that of their abelian envelopes Note that quasi abelian categories form a special class of non abelian additive categories which contains in particular the category of locally convex topological vector spaces and the category of filtered abelian groups In the second part we define what we mean by an elementary quasi abelian category and show that sheaves with values in such a category can be manipulated almost as easily as sheaves of abelian groups In particular we establish that the Poincaré Verdier duality and the projection formula hold in this context The third part is devoted to an application of the results obtained to the cases of filtered and topological sheaves **Annales de la Société scientifique de Bruxelles** Société scientifique de
