Categories Of Commutative Algebras:

Categories of Commutative Algebras Yves Diers, 1992 This book studies the universal constructions and properties in categories of commutative algebras bringing out the specific properties that make commutative algebra and algebraic geometry work Two universal constructions are presented and used here for the first time The author shows that the concepts and constructions arising in commutative algebra and algebraic geometry are not bound so tightly to the absolute universe of rings but possess a universality that is independent of them and can be interpreted in various categories of discourse This brings new flexibility to classical commutative algebra and affords the possibility of extending the domain of validity and the application of the vast number of results obtained in classical commutative algebra This innovative and original work will interest mathematicians in a range of specialities including algebraists categoricians and algebraic geometers

Christensen, Hans-Bjørn Foxby, Henrik Holm, 2024-12-04 Derived category methods entered commutative algebra in the latter half of the 1960s providing among other things a framework for a clear formulation of Grothendieck's Local Duality Theorem Since then their impact on the field has steadily grown and continues to expand This book guides readers familiar with rings and modules through the construction of the associated derived category and its triangulated functors In this context it develops theories of categorical equivalences for subcategories and homological invariants of objects The second half of the book focuses on applications to commutative Noetherian rings The book can be used as a text for graduate courses both introductory and advanced and is intended to serve as a reference for researchers in commutative algebra and related fields To accommodate readers new to homological algebra it offers a significantly higher level of detail than most existing texts on the subject

Homotopy of Operads and Grothendieck-Teichmüller Groups Benoit Fresse, 2017-05-22 The ultimate goal of this book is to explain that the Grothendieck Teichmüller group as defined by Drinfeld in quantum group theory has a topological interpretation as a group of homotopy automorphisms associated to the little 2 disc operad To establish this result the applications of methods of algebraic topology to operads must be developed This volume is devoted primarily to this subject with the main objective of developing a rational homotopy theory for operads The book starts with a comprehensive review of the general theory of model categories and of general methods of homotopy theory The definition of the Sullivan model for the rational homotopy of spaces is revisited and the definition of models for the rational homotopy of operads is

then explained The applications of spectral sequence methods to compute homotopy automorphism spaces associated to operads are also explained This approach is used to get a topological interpretation of the Grothendieck Teichmüller group in the case of the little 2 disc operad This volume is intended for graduate students and researchers interested in the applications of homotopy theory methods in operad theory It is accessible to readers with a minimal background in classical algebraic topology and operad theory

Commutative Algebra Marco Fontana, Salah-Eddine Kabbaj, Bruce Olberding, Irena Swanson, 2010-09-29 Commutative algebra is a rapidly growing subject that is developing in many different directions This volume presents several of the most recent results from various areas related to both Noetherian and non Noetherian commutative algebra This volume contains a collection of invited survey articles by some of the leading experts in the field The authors of these chapters have been carefully selected for their important contributions to an area of commutative algebraic research Some topics presented in the volume include generalizations of cyclic modules zero divisor graphs class semigroups forcing algebras syzygy bundles tight closure Gorenstein dimensions tensor products of algebras over fields as well as many others This book is intended for researchers and graduate students interested in studying the many topics related to commutative algebra

Representations of Algebras and Related Topics Andrzej Skowroński, Kunio Yamagata, 2011 This book which explores recent trends in the representation theory of algebras and its exciting interaction with geometry topology commutative algebra Lie algebras combinatorics quantum algebras and theoretical field is conceived as a handbook to provide easy access to the present state of knowledge and stimulate further development The many topics discussed include quivers quivers with potential bound quiver algebras Jacobian algebras cluster algebras and categories Calabi Yau algebras and categories triangulated and derived categories and quantum loop algebras This book consists of thirteen self contained expository survey and research articles and is addressed to researchers and graduate students in algebra as well as a broader mathematical community The articles contain a large number of examples and open problems and give new perspectives for research in the field

Building Bridges Between Algebra and Topology Wojciech Chachólski, Tobias Dyckerhoff, John Greenlees, Greg Stevenson, 2018-03-31 This volume presents an elaborated version of lecture notes for two advanced courses Re Emerging methods in Commutative Algebra and Representation Theory and Building Bridges Between Algebra and Topology held at the CRM in the spring of 2015 Homological algebra is a rich and ubiquitous area it is both an active field of research and a widespread toolbox for many mathematicians Together these notes introduce recent applications and interactions of homological methods in commutative algebra representation theory and topology narrowing the gap between specialists from different areas wishing to acquaint themselves with a rapidly growing field The covered topics range from a fresh introduction to the growing area of support theory for triangulated categories to the striking consequences of the formulation in the homotopy theory of classical concepts in commutative algebra Moreover they also include a higher categories view of Hall algebras and an introduction to the use of idempotent functors in algebra

Differential Function Spectra, the Differential Becker-Gottlieb Transfer, and Applications to Differential Algebraic K-Theory Ulrich Bunke, David Gepner, 2021-06-21 We develop differential algebraic K theory for rings of integers in number fields and we construct a cycle map from geometrized bundles of modules over such a ring to the differential algebraic K theory We also treat some of the foundational aspects of differential cohomology including differential function spectra and the differential Becker Gottlieb transfer We then state a transfer index conjecture about the equality of the Becker Gottlieb transfer and the analytic transfer defined by Lott In support of this conjecture we derive some non trivial consequences which are provable by independent means Algebraic K-Theory, Commutative Algebra, and Algebraic Geometry R. Keith Dennis, 1992 In the mid 1960 s several Italian mathematicians began to study the connections between classical arguments in commutative algebra and algebraic geometry and the contemporaneous development of algebraic K theory in the US These connections were exemplified by the work of Andreotti Bombieri Salmon and Traverso on seminormality and by Bass Murthy on the Picard groups of polynomial rings Interactions proceeded far beyond this initial point to encompass Chow groups of singular varieties complete intersections and applications of K theory to arithmetic and real geometry This volume contains the proceedings from a US Italy Joint Summer Seminar which focused on this circle of ideas The conference held in June 1989 in Santa Margherita Ligure Italy was supported jointly by the Consiglio Nazionale delle Ricerche and the National Science Foundation The book contains contributions from some of the leading experts in this area *Algebras, Rings and Modules, Volume 2* Michiel Hazewinkel, Nadiya M. Gubareni, 2017-04-11 The theory of algebras rings and modules is one of the fundamental domains of modern mathematics General algebra more specifically non commutative algebra is poised for major advances in the twenty first century together with and in interaction with combinatorics just as topology analysis and probability experienced in the twentieth century This is the second volume of *Algebras Rings and Modules Non commutative Algebras and Rings* by M Hazewinkel and N Gubareni a continuation stressing the more important recent results on advanced topics of the structural theory of associative algebras rings and modules **Extended Abstracts Spring 2015** Dolores Herbera, Wolfgang Pitsch, Santiago Zarzuela, 2016-11-30 This book includes 33 expanded abstracts of selected talks given at the two workshops Homological Bonds Between Commutative

Algebra and Representation Theory and Brave New Algebra Opening Perspectives and the conference Opening Perspectives in Algebra Representations and Topology held at the Centre de Recerca Matemàtica CRM in Barcelona between January and June 2015. These activities were part of the one semester intensive research program Interactions Between Representation Theory, Algebraic Topology and Commutative Algebra (IRTATCA). Most of the abstracts present preliminary versions of not yet published results and cover a large number of topics including commutative and non commutative algebra, algebraic topology, singularity theory, triangulated categories, representation theory overlapping with homological methods. This comprehensive book is a valuable resource for the community of researchers interested in homological algebra in a broad sense and those curious to learn the latest developments in the area. It appeals to established researchers as well as PhD and postdoctoral students who want to learn more about the latest advances in these highly active fields of research. *Algebra, Topology, and Category Theory* Samuel Eilenberg, 1976 **American Journal of Mathematics**, 1916.
