science psychology computer science neuroscience linguistics and philosophy *Psychology of Learning and Motivation*, 2003-09-04 The *Psychology of Learning and Motivation* publishes empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Each chapter provides a thoughtful integration of a body of work *The Emergence of Language* Brian MacWhinney, 2013-03-07 For nearly four centuries our understanding of human development has been controlled by the debate between nativism and empiricism Nowhere has the contrast between these apparent alternatives been sharper than in the study of language acquisition However as more is learned about the details of language learning it is found that neither nativism nor empiricism provides guidance about the ways in which complexity arises from the interaction of simpler developmental forces For example the child's first guesses about word meanings arise from the interplay between parental guidance the child's perceptual preferences and neuronal support for information storage and retrieval As soon as the shape of the child's lexicon emerges from these more basic forces an exploration of emergentism as a new alternative to nativism and empiricism is ready to begin This book presents a series of emergentist accounts of language acquisition Each case shows how a few simple basic processes give rise to new levels of language complexity The aspects of language examined here include auditory representations phonological and articulatory processes lexical semantics ambiguity processing grammaticality judgment and sentence comprehension The approaches that are invoked to account formally for emergent patterns include neural network theory dynamic systems linguistic functionalism construction grammar optimality theory and statistically driven learning The excitement of this work lies both in the discovery of new emergent patterns and in the integration of theoretical frameworks that can formalize the theory of emergentism **Building Object Categories in Developmental Time** Lisa Gershkoff-Stowe, David H. Processes of Change in Brain and Cognitive Development Yuko Munakata, Mark Johnson, 2006-04-06 In recent years there has been a shift within developmental psychology away from examining the cognitive systems at different ages to trying to understand exactly what are the mechanisms that generate change What kind of learning mechanisms and representational changes drive cognitive development How can the imaging techniques available help us to understand these mechanisms This new volume in the highly cited and critically acclaimed Attention and Performance series is the first to provide a systematic investigation into the processes of change in mental development It brings together world class scientists to address brain and cognitive development at several different levels including phylogeny genetics neurophysiology brain imaging behavior and computational modeling across both typically and atypically developing populations Presenting original new research from

the frontiers of cognitive neuroscience this book will have a substantial impact in this field as well as on developmental psychology and developmental neuroscience *The Influence of Generic Language on Children's Thought* Andrei Cimpian,2008 The Handbook of Aging and Cognition Fergus I. M. Craik,Timothy A. Salthouse,2008 Cognitive aging is a flourishing area of research This third edition reviews the findings and theories since the previous edition and evaluates the field s points of growth **Patterns of Language Processing and Growth in Early English-Spanish Bilingualism** Barbara Therese Conboy,2002 Four studies explored patterns of language growth and processing in 64 19 31 month old bilingual children acquiring English and Spanish In the first study cross sectional and longitudinal methods revealed significant relationships between vocabulary size and grammatical development replicating previous studies with monolingual children The compositions of children s lexicons in each language were linked to vocabulary size in that language With few exceptions utterance length and complexity and the emergence of closed class and predicate terms in each language were linked more closely to vocabulary size in the same language than to total conceptual vocabulary TCV size In the second study performance on English and Spanish sentence repetition tests was compared for bilingual and monolingual children matched for vocabulary size in each language The performance of the bilingual children was similar to that of their monolingual controls indicating links between grammatical ability and vocabulary development within the same language The slightly better performance of the bilingual children on a few comparisons suggested some degree of cross linguistic bootstrapping In the third study event related potentials ERPs were used to investigate the neural activity of bilingual children as they processed known and unknown words There were differences in the timing and distribution of the ERP amplitude differences to known vs unknown words for each language and differences in these effects when children with larger TCV sizes were compared to those with smaller TCV sizes These results thus replicated studies with monolingual children that found links between vocabulary development and the organization of ERP effects although the exact patterns were different for the bilingual and monolingual children In the fourth study the effects of mixed vs blocked language testing conditions on ERP patterns were investigated Results indicated that some of the differences in ERP effects between the monolingual and bilingual children noted in the third study may have been due to processing demands created by the mixed language testing condition in which the bilingual children were tested The results of these four studies support experience based accounts of early language acquisition and further establish the use of combined behavioral neural imaging approaches for studying language development in bilingual toddlers
