De Rham Cohomology Of Differential Modules On Algebraic Varieties Progreb In Mathematics S:

De Rham Cohomology of Differential Modules on Algebraic Varieties Yves André, Francesco Baldassarri, 2012-12-06 This is a study of algebraic differential modules in several variables and of some of their relations with analytic differential modules Let us explain its source The idea of computing the cohomology of a manifold in particular its Betti numbers by means of differential forms goes back to E Cartan and G De Rham In the case of a smooth complex algebraic variety X there are three variants i using the De Rham complex of algebraic differential forms on X ii using the De Rham complex of holomorphic differential forms on the analytic manifold X underlying X iii using the De Rham complex of complex differential forms on the differentiable manifold X_{dR} underlying X These variants turn out to be equivalent Namely one has canonical isomorphisms of hypercohomology While the second isomorphism is a simple sheaf theoretic consequence of the Poincaré lemma which identifies both vector spaces with the complex cohomology $H^*(X, \mathbb{C})$ of the topological space underlying X the first isomorphism is a deeper result of A Grothendieck which shows in particular that the Betti numbers can be computed algebraically This result has been generalized by P Deligne to the case of nonconstant coefficients for any algebraic vector bundle M on X endowed with an integrable regular connection one has canonical isomorphisms The notion of regular connection is a higher dimensional generalization of the classical notion of Fuchsian differential equations only regular singularities

Nonarchimedean and Tropical Geometry Matthew Baker, Sam Payne, 2016-08-18 This volume grew out of two Simons Symposia on Nonarchimedean and tropical geometry which took place on the island of St John in April 2013 and in Puerto Rico in February 2015 Each meeting gathered a small group of experts working near the interface between tropical geometry and nonarchimedean analytic spaces for a series of inspiring and provocative lectures on cutting edge research interspersed with lively discussions and collaborative work in small groups The articles collected here which include high level surveys as well as original research mirror the main themes of the two Symposia Topics covered in this volume include Differential forms and currents and solutions of Monge Ampère type differential equations on Berkovich spaces and their skeletons The homotopy types of nonarchimedean analytifications The existence of faithful tropicalizations which encode the topology and geometry of analytifications Relations between nonarchimedean analytic spaces and algebraic geometry including logarithmic schemes birational geometry and the geometry of algebraic curves Extended notions of tropical varieties which relate to Huber's theory of adic spaces analogously to the way that usual tropical varieties relate to Berkovich spaces and Relations between nonarchimedean geometry and combinatorics including deep and fascinating connections between matroid theory tropical geometry and Hodge theory

Complex Convexity and Analytic Functionals Mats Andersson, Mikael Passare, Ragnar Sigurdsson, 2012-12-06 A set in complex Euclidean space is called \mathbb{C} convex if all its intersections with complex lines are contractible and it is said to be linearly convex if its complement is a union of complex hyperplanes These notions are intermediates between ordinary geometric convexity and pseudoconvexity Their importance

was first manifested in the pioneering work of Andr Martineau from about forty years ago Since then a large number of new related results have been obtained by many different mathematicians The present book puts the modern theory of complex linear convexity on a solid footing and gives a thorough and up to date survey of its current status Applications include the Fantappi transformation of analytic functionals integral representation formulas polynomial interpolation and solutions to linear partial differential equations

Torus Actions On Symplectic Manifolds Michèle Audin, 2004-09-27 The material and references in this extended second edition of *The Topology of Torus Actions on Symplectic Manifolds* published as Volume 93 in this series in 1991 have been updated Symplectic manifolds and torus actions are investigated with numerous examples of torus actions for instance on some moduli spaces Although the book is still centered on convexity results it contains much more material in particular lots of new examples and exercises

Infinite Groups: Geometric, Combinatorial and Dynamical Aspects Laurent Bartholdi, Tullio Ceccherini-Silberstein, Tatiana Smirnova-Nagnibeda, Andrzej Zuk, 2005-12-09 This book offers a panorama of recent advances in the theory of infinite groups It contains survey papers contributed by leading specialists in group theory and other areas of mathematics Topics include amenable groups Kaehler groups automorphism groups of rooted trees rigidity C algebras random walks on groups pro p groups Burnside groups parafree groups and Fuchsian groups The accent is put on strong connections between group theory and other areas of mathematics

Singular Sets of Minimizers for the Mumford-Shah Functional Guy David, 2005-03-22 The Mumford Shah functional was introduced in the 1980s as a tool for automatic image segmentation but its study gave rise to many interesting questions of analysis and geometric measure theory The main object under scrutiny is a free boundary K where the minimizer may have jumps The book presents an extensive description of the known regularity properties of the singular sets K and the techniques to get them It is largely self contained and should be accessible to graduate students in analysis The core of the book is composed of regularity results that were proved in the last ten years and which are presented in a more detailed and unified way

On the Topology of Isolated Singularities in Analytic Spaces José Seade, 2005-11-18 This book has been awarded the Ferran Sunyer i Balaguer 2005 prize The aim of this book is to give an overview of selected topics on the topology of real and complex isolated singularities with emphasis on its relations to other branches of geometry and topology The first chapters are mostly devoted to complex singularities and a myriad of results spread in a vast literature which are presented here in a unified way accessible to non specialists Among the topics are the fibration theorems of Milnor the relation with 3 dimensional Lie groups exotic spheres spin structures and 3 manifold invariants the geometry of quadrics and Arnold's theorem which states that the complex projective plane modulo conjugation is the 4 sphere The second part of the book studies pioneer work about real analytic singularities which arise from the topological and geometric study of holomorphic vector fields and foliations In the low dimensional case these turn out to be related to fibred links in the 3 sphere defined by meromorphic functions This provides new methods for constructing manifolds equipped with a rich

geometry The book is largely self contained and serves a wide audience of graduate students mathematicians and researchers interested in geometry and topology **Analele Științifice Ale Universității "Al. I. Cuza" Din Iași** ,2000

Mazon,2012-12-06 Award winning monograph of the Ferran Sunyer i Balaguer Prize 2003 This book contains a detailed mathematical analysis of the variational approach to image restoration based on the minimization of the total variation submitted to the constraints given by the image acquisition model This model initially introduced by Rudin Osher and Fatemi had a strong influence in the development of variational methods for image denoising and restoration and pioneered the use of the BV model in image processing After a full analysis of the model the minimizing total variation flow is studied under different boundary conditions and its main qualitative properties are exhibited In particular several explicit solutions of the denoising problem are computed **Mathematical Reviews** ,2002 *Forthcoming Books* Rose Arny,2000 American Book Publishing Record ,2001 *Current Developments in Mathematics* ,2002 **Annales Scientifiques de L'École Normale Supérieure** École normale supérieure (France),2002 Reviews in Number Theory, 1984-96 ,1997 These six volumes include approximately 20 000 reviews of items in number theory that appeared in Mathematical Reviews between 1984 and 1996 This is the third such set of volumes in number theory The first was edited by W J LeVeque and included reviews from 1940 1972 the second was edited by R K Guy and appeared in 1984 Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen ,2001 **Reviews in Global Analysis, 1980-86 as Printed in Mathematical Reviews** ,1988 **The Mathematical Intelligencer** ,1988 **Reviews in Complex Analysis, 1980-86** ,1989
