## **De Vliegkunst In Het Dierenrijk:**

*Avian Flight* John J. Videler, 2006-08-10 *Avian Flight* covers all the main aspects of aerial locomotion by birds including sections on the history of thinking about bird flight aerodynamics functional morphology evolution kinematics physiology energetics and the cost of flight The subject is complex and still not yet fully understood and the author argues a convincing case for rethinking or even abandoning some of the old well established concepts **De vliegkunst in het dierenrijk**

,1950 *De vliegkunst in het dierenrijk* Everhard Johannes Slijper, 1950 **A Century of Fluid Mechanics in The Netherlands** Fons Alkemade, 2019-05-14 In October 1918 Jan Burgers 23 years old started as professor of aerodynamics hydrodynamics and their applications at the Technical University in Delft This can be regarded as the birth of fluid mechanics in the Netherlands not only as an academic discipline but also as the start of the serious study of flow phenomena in engineering environments During the period of Burgers tenure in Delft till 1955 three Dutch institutes were founded which to this day remain important centres of research in various fields of fluid mechanics aerospace engineering hydraulics and naval engineering Burgers and others developed mathematical experimental and numerical approaches of a broad range of fluid flows some of their achievements have become well known worldwide and can be seen as highlights of Dutch fluid mechanics From the 1950s stromingsleer flow theory attained a permanent and respected place in the curriculum and research of technical universities at many old and new research institutes and also at several industrial research laboratories In the 1980s fluid mechanics finally became recognized as a serious branch of physics and an important field of applied science This resulted in a close cooperation between academic groups institutes and industry and the foundation of the Burgerscentrum the Research School for Fluid Mechanics in the Netherlands One hundred years after Burgers appointment in Delft Dutch fluid mechanics is still very much alive This volume gives a full account of its rich history and also offers a view on the broad range of areas of application transport energy production biology and medicine production processes etc It has been written not only for those working in this field but also for those interested in the history of Dutch science and in the development of science and the fascinating world of fluid flow phenomena **Selected Papers of J. M. Burgers** F.T. Nieuwstadt, J.A. Steketee, 2012-12-06 J M Burgers 1895 1981 is regarded as one of the leading scientists in the field of fluid mechanics contributing many important results a number of which still bear his name However the work of this outstanding scientist was mostly published in the Proceedings and Transactions of The Royal Netherlands Academy of Sciences of which he was a distinguished member Nowadays this work is almost impossible to obtain through the usual library channels Therefore the editors have decided to reissue the most important work of J M Burgers which gives the reader access to the original papers which led to important results now known as the Burgers Equation the Burgers Vector and the Burgers Vortex Further the book contains a biography of J M Burgers which provides the reader with both information on his scientific life as well as a rounded impression of the many activities which J M Burgers performed or was involved in outside his science *De*
