Intelligent Control for Electric Power Systems and Electric Vehicles G. Rigatos,M. Abbaszadeh,M Hamida,P.

Siano,2024-10-30 The present monograph offers a detailed and in depth analysis of the topic of Intelligent Control for Electric Power Systems and Electric Vehicles First Nonlinear optimal control and Lie algebra based control Control based on approximate linearization and Global linearization based control concepts is analyzed Next Differential flatness theory and flatness based control methods Global linearization based control with the use of differential flatness theory and Flatness based control of nonlinear dynamical systems in cascading loops is treated Following the control theoretic part Control of DC and PMBLDC electric motors Control of DC motors through a DC DC converter and Control of Per manent Magnet Brushless DC motors is presented Besides Control of VSI fed three phase and multi phase PMSMs Nonlinear optimal control VSI fed three phase PMSMs and Nonlinear optimal control VSI fed six phase PMSMs is explained Additionally Control of energy conversion chains based on PMSMs Control of wind turbine and PMSM based electric power unit and Control of a PMSM driven gas compression unit is studied Besides Control of energy conversion chains based on Induction Ma chines Control of the VSI fed three phase induction motor Control of an induction motor driven gas compressor and Control of induction generator based shipboard microgrids is explained Next Control of multi phase machines in gas processing and power units Control of gas compressors actuated by 5 phase PMSMs and Control of 6 phase induction generators in renewable energy units is introduced Moreover Control of Spherical Permanent Magnet Synchronous Motors and Switched Reluctance Mo tors Control of spherical permanent magnet synchronous motors Control of switched reluctance motors for electric traction and Adaptive control for switched reluctance motors is analyzed Furthermore Control of traction and powertrains in Electric Vehicles and Hybrid Electric Vehicles Control of multi phase motors in the traction system in electric vehicles and Control of synchronous machines and converters in power chains of hybrid electric vehicles is explained Finally Control of renewable power units and heat management units Control of residential microgrids with Wind Generators Fuel Cells and PVs and Control of heat pumps for thermal management in electric vehicles it treated The new control methods which are proposed by the monograph treat the control problem of the complex nonlinear dynamics of electric power systems and electric vehicles without the need for complicated state space model transformations and changes of state variables The proposed control schemes are modular and scalable and can be applied to a large class of dynamic models of electric power systems and electric vehicles They have a clear and easy to implement algorithmic part while they also exhibit a moderate computational load The proposed control schemes foster the optimized exploitation of renewable energy sources and the reliable integration of renewable energy units in the power grid Besides they support the transition to electromotion and the deployment of the use of electric vehicles The manuscript is suitable for teaching nonlinear control estimation and fault
