Dynamics Of Values In Fertility Change:

Dynamics of Values in Fertility Change Richard Leete, 1999-04-01 The global transformation in the number of children women bear has been one of the most remarkable changes in social behaviour in the twentieth century The search for explanations of the causes in childbearing behaviour and particularly in the values attached to children remains a central research preoccupation of population scientists This book explores the dimensions of values identified as significant in their impact on fertility decisions It offers a range of perspectives on a mosaic of values perceived to be of importance in influencing the bearing and caring of children The book examines the macro and micro theories of the value of children and considers the multi dimensional nature of value change The chapters explore the nature of the mechanisms by which value change may serve to reinforce or promote the ideational essence of change and the impact of pressures for change It is observed that gender religion and culture all function as complementary lenses through which the necessity of value maintenance or modification is viewed The book concludes that fertility behaviour is value driven but that fertility change is not necessarily driven by value change The values of most significance to fertility are more fundamental and general values rather than explicit fertility values *Area Studies (Regional Sustainable Development Review) Japan* Yukio Himiyama, 2009-09-16 *Area Studies Regional Sustainable Development Review Japan* is a component of *Encyclopedia of Area Studies Regional Sustainable Development Review* in the global *Encyclopedia of Life Support Systems EOLSS* which is an integrated compendium of twenty one Encyclopedias This volume on *Area Studies Regional Sustainable Development Review Japan* reviews initiatives and activities towards sustainable development in Japan such as *Perspectives on Sustainable Development in Japan Changing Consumption Patterns in Japan Demographic Dynamics in Japan Protection and Promotion of Human Health in Japan Promoting Sustainable Agriculture and Rural Development Environmentally Sound Management of Biotechnology in Japan Protection of Oceans and Their Living Resources Japan Soil And Groundwater Contamination And Remediation In Japan Education Public Awareness and Training National Mechanisms and International Cooperation for Capacity Building Japan International Legal Instruments and Mechanisms in Japan Information for Decision Making Forestry Principles in Japan Agreements Rio Declaration Global Forum NGO Treaties Linking Japan to the World The View of Nature in Japanese Literature Towards A Sustainable Civilization and Society A Socio cultural Ecological Perspective from Japan Future Scenarios Predicting Our Environmental Future* Although these presentations are with specific reference to Japan they provide potentially useful lessons for other regions as well This volume is aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs **Dynamic Demographic Analysis** Robert Schoen, 2016-03-15 This volume presents state of the art analyses from scholars dealing with a range of demographic topics of current concern including longevity mortality and morbidity migration and how population composition impacts intergenerational transfer schemes

New approaches are applied to such issues as measuring changes in cohort survivorship in low mortality populations patterns of mortality improvement at older ages and the consequences of heterogeneity in the susceptibility to death Studies examine models of the current status of the HIV AIDS epidemic advance present methods for estimating population change in small areas and strive to disentangle age period and cohort effects In sum the book addresses key contemporary issues in measuring and modeling dynamic populations and advances the frontier of dynamic demography

Dynamic Population Models Robert Schoen, 2007-05-05 Dynamic Population Models is the first book to comprehensively discuss and synthesize the emerging field of dynamic modeling Incorporating the latest research it includes thorough discussions of population growth and momentum under gradual fertility declines the impact of changes in the timing of events on fertility measures and the complex relationship between period and cohort measures The book is designed to be accessible to those with only a minimal knowledge of calculus
