Encoding Capital Rodney Loepky, 2013-09-13 This book deals with the rapid changes in contemporary molecular biology particularly genome sciences and the manner in which they can be understood through the lens of political economy Specifically the work investigates the case of the United States led Genome Project HGP in order to show that even large scale basic science is closely bound up in the progression of capitalist social relations The work has in part been motivated by the lack of rigorous analysis of the HGP Most the existing literature tends to present either a chronological review of events surrounding the HGP or describe it thematically In contrast this book contributes to a needed discussion concerning the why and how of the HGP emergence It elucidates the features within capitalist social relations which have simultaneously enable the HGP and ensure its amenability to systemic demands The work s most compelling elements are both historical and analytical Historically it places the HGP within the context of wider political economic and social issues Related to this it puts forward an analytical explanatory understanding of the project s emergence making it a valuable tool for both political economists science society theorists and even bioethicists *Education as Enforcement* Kenneth Saltman, David A.

Gabbard, 2010-09-13 The first volume to focus on the intersections of militarization corporations and education Education as Enforcement exposed the many ways schooling has become the means through which the expansion of global corporate power are enforced Since publication of the first edition these trends have increased to disturbing levels as a result of the

extensive militarization of civil society the implosion of the neoconservative movement and the financial meltdown that radically called into question the basic assumptions undergirding neoliberal ideology An understanding of the enforcement of these corporate economic imperatives remains imperative to a critical discussion of related militarized trends in schools whether through accountability and standards school security or other discipline based reforms Education as Enforcement elaborates upon the central arguments of the first edition and updates readers on how recent events have reinforced their continued original relevance In addition to substantive updates to several original chapters this second edition includes a new foreword by Henry Giroux a new introduction and four new chapters that reveal the most contemporary expressions of the militarization and corporatization of education New topics covered in this collection include zero tolerance foreign and second language instruction in the post 9 11 context the rise of single sex classrooms and the intersection of the militarization and corporatization of schools under the Obama administration *Democracy and New Media* Henry Jenkins, David Thorburn, Brad Seawell, 2004 Essays on the promise and dangers of the Internet for democracy

Corporations and Cultural Industries Scott W. Fitzgerald, 2011-12-28 Corporations and Cultural Industries Time Warner Bertelsmann and News Corporation by Scott Warren Fitzgerald provides an introduction to the political economy of international media corporations This text fills a fundamental gap in the critical media studies field expanding on the relative paucity of academic studies To ground the discussion Fitzgerald focuses on the growth of three specific media conglomerates Time Warner Bertelsmann and News Corporation Adopting an approach rooted in critical political economy the book explains the corporations growth through an engagement with broader social theories the wider conditions of capital accumulation especially theories of corporate competition and financialization issues of institutional logic and corporate strategies and the role of states as regulators mediators of opposed interests and facilitators of corporate expansion The first section presents debates in social theory addressing issues that pertain to cultural industries and dimensions in which they both challenge and extend these wider social theories The second section presents detailed case studies of the three contemporary media mega companies across the range of operations they coordinate both within and outside the cultural industries By analyzing the specifics and complexities of different media industries Corporations and Cultural Industries examines how financialization processes re gear the internal operations of media corporations in a manner that pits one sector against another This book provides an in depth study that can be used as stand alone teaching resources or as a valuable supplement to a variety of media courses **Red Seminars** Peter McLaren, 2005 Red Seminars is a collection of essays about the crisis of capitalism and democracy and its impact on education A steadfast proponent of collective scholarship renowned critical educator Peter McLaren is partnered in this volume with a new generation of radical scholars The result is a timely study that moves critical pedagogy into new and urgent directions BOOK JACKET *Cutting Edge* Jim Davis, Thomas A. Hirschl, Michael Stack, 1997 A robot can build a car But a robot cannot buy a car The explosion in the development of computer and robot based

manufacturing is seeing the rapid expansion of laborless production systems. Such systems create enormous instability both for the overall world economy where money previously paid in wages is now invested in labor saving technology and therefore cannot be spent on goods and for workers whose jobs are being de skilled or are simply disappearing. Bringing together contributions from workers employed in the new electronics and information industries with theorists in economics, politics and science, *Cutting Edge* provides an up to the minute analysis of the complex relations between technology and work. Individual essays look at topics including the cyclical nature of a technologically driven economy, the privatization of knowledge which new information industries demand, the convergence of different economic sectors under the impact of digitalization and the strategies which trade unionists and governments might deploy to protect jobs and living standards. Technology has the potential to end material scarcity and lay the foundations for higher forms of human fulfillment. But under existing power structures it is more likely to exacerbate the poverty and misery under which most people live. *Cutting Edge* weighs that balance and in helping us to understand how technology interacts with the production of goods and services, tips it in the direction of a more equal and creative world. *Dialogue and Universalism*, 2000

Cognitive Capitalism, Education, and Digital Labor Michael A. Peters, Ergin Bulut (Ed), 2011. Cognitive capitalism, sometimes referred to as third capitalism after mercantilism and industrial capitalism, is an increasingly significant theory given its focus on the socio-economic changes caused by Internet and Web 2.0 technologies that have transformed the mode of production and the nature of labor. The theory of cognitive capitalism has its origins in French and Italian thinkers, particularly Gilles Deleuze and Felix Guattari's *Capitalism and Schizophrenia*, Michel Foucault's work on the birth of biopower, and Michael Hardt and Antonio Negri's *Empire* and *Multitude*, as well as the Italian Autonomist Marxist movement that had its origins in the Italian operaismo/workerism of the 1960s. In this collection, leading international scholars explore the significance of cognitive capitalism for education, especially focusing on the question of digital labor.

Capitalism Rebooted? Dave Broad, Wayne Andrew Antony, 2006. Investigating the effects of the New Economy on Canada's workers and their families, this study examines the promises made by the advances of technology and globalization versus the challenges that face workers today. The changes that have been made in the working world have not been the predicted boon for laborers; the book explains, leading instead to underemployment and a rehash of an old exploitative system. *Book Review Digest*, 2000

Creativity and the Global Knowledge Economy Michael A. Peters, Simon Marginson, Peter Murphy, 2009. This is a major work by three international scholars at the cutting edge of new research that investigates the emerging set of complex relationships between creativity, design, research, higher education and knowledge capitalism. It highlights the role of the creative and expressive arts, performance, aesthetics in general, and the significant role of design as an underlying infrastructure for the creative economy. This book tracks the most recent mutation of these serial shifts from postindustrial economy to the information economy to the digital economy to the knowledge economy to the creative economy to

summarize the underlying and essential trends in knowledge capitalism and to investigate post market notions of open source public space The book hypothesizes that creative economy might constitute an enlargement of its predecessors that not only democratizes creativity and relativizes intellectual property law but also emphasizes the social conditions of creative work It documents how these profound shifts have brought to the forefront forms of knowledge production based on the commons and driven by ideas not profitability per se and have given rise to the notion of not just knowledge management but the design of creative institutions embodying new patterns of work Ethical Marxism Bill Martin,2008 Argues for a revised Marxism that takes ethics rather than political economy and scientific investigation as its core Provided by publisher

Disarming the New World Disorder Ken Coates,2000 **The Spokesman** ,1999 **The Information Society** Robin Mansell,2009 The information society refers to a constellation of developments arising from the growing use of communication technologies in the acquisition storage and processing of information and the role of information in supporting the creation and exchange of knowledge Research on information societies really began to take off in the 1970s when Daniel Bell wrote about the information age While there were earlier works that focused on the growing importance of information in the economy it was not until the mid 1990s and the spread of the Internet that this field of study experienced a huge expansion across a broad range of disciplines in the social sciences and beyond A critical mass of scholarship has now accumulated establishing the information society and information societies as a terrain of substance and complexity the exploration and understanding of which requires increasingly sophisticated navigation skills As research in and around the area continues to flourish as never before this new title in Routledge s Major Works series Critical Concepts in Sociology meets the need for an authoritative reference work to make sense of a rapidly growing and ever more complex corpus of literature and to provide a map of the area as it has emerged and developed over the last thirty years or so The Information Society is fully indexed and has a comprehensive introduction newly written by the editor which places the material in its historical and intellectual context It is an essential work of reference and is destined to be valued by scholars and students as well as policy makers and practitioners in the field as a vital one stop research resource Publisher s website **Capital & Class** ,2007 The Indian Journal of Labour Economics ,2005
