Proceedings of the Fourth International Symposium on Cyclodextrins J. Szejtli, O. Huber, 2012-12-06 The rapidly growing number of papers and patents on Cyclodextrins and their potential or actual industrial uses raised the idea to organize a Symposium on Cyclodextrins This Symposium held in September 1981 in Budapest with more than 200 participants from 17 countries proved to be very successful in every respect therefore it has been accepted unanimously to organize the IInd CD Symposium in 1984 in Tokyo The Budapest Symposium got posteriorly the First adjective The IInd Symposium was held together with the IIIrd Int Symposium on Chlathrate Compounds and Molecular Inclusion Phenomena The IIIrd CD Symposium also was held as a Joint Symposium with the IVth Chlathrate Symposium in Lancaster U K 1986 The limited time however showed that such a broad field from calixarenes to zeolites can not be managed efficiently Therefore the International Organizing Committee voted for separation of two Symposia in the future The IVth Int CD Symposium was held in Munich in April 1988 and the Vth Chlathrate Symposium called already Vth Int Symposium on Inclusion Phenomena and Molecular Recognition was held in Alabama Sept 1988 In Munich 220 participants from 21 countries attended 32 verbal lectures and 54 posters This volume contains the submitted 71 manuscripts of the IVth Cyclodextrin Symposium Proceedings of the Eighth International Symposium on Cyclodextrins J. Szejtli, 2013-11-11 Cyclodextrins are gaining industrial interest owing to their particular structure These cyclic amyloses are commonly composed of 6 7 or 8 named α β γ CD glucose units They undergo complexation with quite a large number of substances by molecular inclusion Their potential for industrial application is substantiated by their ability to protect fragile

substances from oxygen and UV to delay the evolution of volatiles and to aid the ancillary processing of dangerous or volatile substances in powder ed form Though α and γ CD exhibit different inclusion specificity β CD has found more attention than the others This is due to the fact that most of the cyclodextrin producing enzymes known produce predominantly β CD Furthermore β CD is by far the least soluble form leading to a relatively simple production and purification Consequently β CD is already in production on an industrial scale while α and γ CD are still more or less regarded as specialities A further CD producing enzyme has been found in the medium of *Klebsiella pneumoniae* I Since this CGT appeared to produce predominantly α CD it has been chosen to develop a process for the production of α CD
