Cutters Wake:

At the Edge of Honor Robert N. Macomber, 2020-05-01 Robert Macomber's Honor series of naval fiction follows the life and career of Peter Wake in the U S Navy during the tumultuous years from 1863 to 1901. *At the Edge of Honor* is the first in the series and winner of the Patrick D Smith Literary Award for Best Historical Novel of Florida. The year is 1863. The Civil War is leaving its bloody trail across the nation as Peter Wake, born and bred in the snowy North, joins the U S Navy as a volunteer officer and arrives in steamy Florida for duty with the East Gulf Blockading Squadron. The idealistic Peter Wake has handled boats before but he's new to the politics and illicit liaisons that war creates among men. Assigned to the *Rosalie*, a tiny armed sloop, Captain Wake commands a group of seasoned seamen on a series of voyages to seek and arrest Confederate blockade runners and sympathizers from Florida's coastal waters through to near the remote out islands of the Bahamas. Wake risks his reputation when he falls in love with Linda Donahue, whose father is a Confederate zealot and steals away to spend precious hours with her at her Key West home. Their love is tested as Wake learns he must make the ugly decisions of war even in a beautiful tropical paradise. Decisions that take him up to the edge of honor. **The Granite Cutters' Journal**

, 1917 *Geometric and Algorithmic Aspects of Computer-aided Design and Manufacturing* Ravi Janardan, Michiel Smid, Debasish Dutta, Computer Aided Design and Manufacturing. CAD/CAM is concerned with all aspects of the process of designing, prototyping, manufacturing, inspecting and maintaining complex geometric objects under computer control. As such, there is a natural synergy between this field and Computational Geometry (CG) which involves the design, analysis, implementation and testing of efficient algorithms and data representation techniques for geometric entities such as points, polygons, polyhedra, curves and surfaces. The DIMACS Center, Piscataway, NJ, sponsored a workshop to further promote the interaction between these two fields. Attendees from academia, research laboratories and industry took part in the invited talks, contributed presentations and informal discussions. This volume is an outgrowth of that meeting. Topics covered in this volume include geometric modeling, computational topology, computational metrology, geometric constraint solving, part immobilization, geometric aspects of machining, layered manufacturing and algebraic methods. The book is suitable for graduate students and researchers interested in geometric and algorithmic aspects of computer-aided design and manufacturing.
