Cybernetics, Art, and Ideas Jasia Reichardt, 1971      Cybernetics, art, and ideas Jasia Reichardt, 1971      **Cybernetics** Jasia Reichardt, 1971      *Cybernetics, art, and ideas* Jasia Reichardt, 1971      Cybernetics, Art, and Ideas Jasia Reichardt, 1971      **Behaviourist Art and Cybernetics** Kate Sloan, 2025-09-29 Drawing together key areas of cybernetic art practice in the UK and USA this book assesses British and American cybernetic art as relating to the intersecting field of Behaviourism This study takes as a starting point Roy Ascott's essay Behaviourist Art and the Cybernetic Vision 1966 and uses it to define a field of Behaviourist art from the period 1945-1975 Kate Sloan establishes the role of the cybernetic concept of feedback as a defining factor in understanding works of art as behavioural expanded well beyond the perimeters of what we consider cybernetic art The book also demonstrates how light as a behavioural trigger informed several discrete areas of art making from cybernetic art to countercultural light shows and behaviourist architectures The book will be of interest to scholars working in art history technology studies music history architectural history and design history

Making Art Work W. Patrick McCray, 2020-10-20 The creative collaborations of engineers artists scientists and curators over the past fifty years Artwork as opposed to experiment Engineer versus artist We often see two different cultural realms separated by impervious walls But some fifty years ago the borders between technology and art began to be breached In this book W Patrick McCray shows how in this era artists eagerly collaborated with engineers and scientists to explore new technologies and create visually and sonically compelling multimedia works This art emerged from corporate laboratories artists studios publishing houses art galleries and university campuses Many of the biggest stars of the art world Robert Rauschenberg Yvonne Rainer Andy Warhol Carolee Schneemann and John Cage participated but the technologists who contributed essential expertise and aesthetic input often went unrecognized      When the Machine Made Art Grant D. Taylor, 2014-04-10 When the Machine Made Art covers the reception and criticism of computer art from its emergence in 1963 to its crisis in 1989 when ideological differences fragment the art movement The text begins by identifying the various divisions between the humanistic and scientific cultures that inform early criticism The fact that the first computer art has military origins and is imbued with various techno science mythologies places the movement at odds with artworld orthodoxy Yet while mainstream art critics reproach computerized art a comparison between similar art forms of the era such as conceptual art reveals that the criticism of computer art was motivated more by the fear of the machine than by aesthetics Dr Grant Taylor shows that social anxiety often fueled by Cold War dystopianism posited the computer as a powerful instrument in the overall subordination of the individual to the emerging technocracy But even though anti computer sentiment abated in the late 1970s computer art did not find acceptance The book illustrates how computer art's exponents desiring artworld legitimacy traced its lineage back to modernism Conversely in the 1980s art theorists employing the latest critical theory began critiquing the assumptions of modernism and thus viewed computer art's modernist history as hopelessly outdated

And yet other critics reconciled computer technology with the critical insights of postmodernism viewing the computer as a pluralistic agent that could challenge modernist conventions. Nonetheless while postmodernist criticism enabled the formation of new discourses for emerging digital arts it left computer art which was committed to modernist and techno science philosophies in a state of crisis.

**Art, Cybernetics and Pedagogy in Post-War Britain** Kate Sloan, 2019-02-14

This is the first full length study about the British artist Roy Ascott one of the first cybernetic artists with a career spanning seven decades to date. The book focuses on his early career exploring the evolution of his early interests in communication in the context of the rich overlaps between art science and engineering in Britain during the 1950s and 1960s. The first part of the book looks at Ascott's training and early work. The second part looks solely at Groundcourse Ascott's extraordinary pedagogical model for visual arts and cybernetics which used an integrative and systems based model drawing in behaviourism analogue machines performance and games. Using hitherto unpublished photographs and documents this book will establish a more prominent place for cybernetics in post war British art.

*Humans at Work in the Digital Age* Shawna Ross, Andrew Pilsch, 2019-12-05

*Humans at Work in the Digital Age* explores the roots of twenty first century cultures of digital textual labor mapping the diverse physical and cognitive acts involved and recovering the invisible workers and work that support digital technologies. Drawing on 14 case studies organized around four sites of work this book shows how definitions of labor have been influenced by the digital technologies that employees use to produce interpret or process text. Incorporating methodology and theory from a range of disciplines and highlighting labor issues related to topics as diverse as census tabulation market research electronic games digital archives and 3D modeling contributors uncover the roles played by race class gender sexuality and national politics in determining how narratives of digital labor are constructed and erased. Because each chapter is centered on the human cost of digital technologies however it is individual people immersed in cultures of technology who are the focus of the volume rather than the technologies themselves. *Humans at Work in the Digital Age* shows how humanistic inquiry can be a valuable tool in the emerging conversation surrounding digital textual labor. As such this book will be essential reading for academics and postgraduate students engaged in the study of digital humanities human computer interaction digital culture and social justice race class gender and sexuality in digital realms the economics of the internet and technology in higher education.

**Cybernetics of Art** M. J. Rosenberg,2024-07-31 First published in 1983 Cybernetics of Art uses the methodology and concepts of cybernetics to explore art and the creative process Part I surveys the domain that includes both science and the arts attempting to understand their differing viewpoints and the basis of conflicts between them Art is approached as a method of knowledge aimed at knowledge of experience per se as distinct from knowledge derived through experience Part II poses the problem of notionally constructing an authorship machine and develops the technical argument by exploring the question of the kind of machine it would need to be Part III examines the products of such a machine with a view to finding criteria for distinguishing those that might be called art An extended non technical commentary accompanies the text throughout with the dual aim of comparing the book s technical conclusions with ideas expressed by critiques and practicing artists and assisting readers unfamiliar with the information sciences in following the argument In a world dominated by artificial intelligence this interdisciplinary book will be useful for scholars and researchers of cybernetics art and humanities and social sciences in general
