Cycles Of Time And Scientific Learning In Medieval Europe:

Cycles of Time and Scientific Learning in Medieval Europe Wesley M. Stevens, 2024-10-28 The calendar worked out by Bede remains essentially the one we still use today yet the mathematical and scientific studies of the early medieval schools have been largely neglected in most discussions of the cultural and intellectual history of Latin Europe These articles by Wesley Stevens are based on an unrivalled knowledge of the manuscript sources and provide a very different perspective demonstrating the real vitality of this science in the early medieval West Working from the original texts and diagrams he identifies and explains mathematical reckonings and astronomical cycles by early Greek Roman and Christian scholars Through made for religious purposes those early studies created a demand for standard arithmetic geometry and astronomy and this remained of often intense interest through into the 9th century in the schools of Fulda and Reichenau One paper here further sets out to correct much mis information on the ideas of Isidore Boniface and other church fathers a second revised especially for this volume looks in detail at Bede s scientific achievements his theories of latitudes and tides as well as his cosmology and computus

The Construction of Communities in the Early Middle Ages Richard Corradini, Maximilian Diesenberger, Helmut Reimitz, 2003 This volume provides a complex discussion of the variety of social efforts which were undertaken to create meaningful communities in the process of the formation of the early medieval gentes and kingdoms in the post Roman west

The Development of Mathematics in Medieval Europe Menso Folkerts, 2006 This volume complements the previous collection of articles by Menso Folkerts Essays on Early Medieval Mathematics It deals with the development of mathematics in Europe from the 12th century to about 1500

Ælfric's De Temporibus Anni Aelfric (Abbot of Eynsham.), 2009 A new and comprehensive edition and translation of a key Anglo Saxon text De temporibus anni a concise handbook of calendar and computus astronomy and natural science dates from the late tenth century It seems to have circulated anonymously but analysis of its language and content shows it to be by lfric one of the most prolific and widely studied authors of Anglo Saxon England Unlike the earlier works of Bede and Isidore it is written in the vernacular despite its Latin title possibly the earliest such work in a vernacular language in western Europe This new edition incorporates the fruits of modern research into the scientific and religious background to the work as well as the findings of recent studies on palaeography and textual criticism It is also the most comprehensive edition yet produced including notes glossary and bibliography and the first modern English translation presented en face for some 140 years By means of these and the inclusion of a detailed introduction and commentary it renders the work more accessible both to those interested in the history of science and to students of Anglo Saxon language and literature Dr MARTIN BLAKE works with medieval manuscripts in the Department of Manuscripts and University Archives at Cambridge University Library

Court Culture in the Early Middle Ages Catherine Cubitt, 2003 This volume sets the study of early medieval political culture upon a new footing by its wide ranging and interdisciplinary examination of the place of the court in the kingdom and

its role as a centre of intellectual and religious debate **Planetary Diagrams for Roman Astronomy in Medieval Europe, Ca. 800-1500** Bruce Eastwood, Gerd Grasshoff, 2004 Early medieval astronomy esp in the era of Charlemagne Functions Sources Plinian Diagrams Macrobian Diagrams Calcidian Diagrams Capellan Diagrams Illus This is a print on demand publication **Zwischen Niederschrift und Wiederschrift** Richard Corradini, Max Diesenberger, Meta Niederkorn-Bruck, 2010 Beitr teilw engl teilw dt teilw franz *Libraries & Culture* , 1997 Sudhoffs Archiv Immo Warntjes, 1966 Zeitschrift für Wissenschaftsgeschichte The North in the Old English Orosius Irmeli Valtonen, 2008 *Peritia* , 1998 *The Practice of British Geology, 1750-1850* H. S. Torrens, 2002 The thirteen reprinted articles collected here all but one first published in the 1990s the exception appeared in 1983 examine the lives careers discoveries and technological innovations of various geologists in the UK in the 18th and 19th centuries The processes of the mining industry in England Ireland Scotland and Wales are revealed as a result particularly that of coal Torrens no affiliation is given though he mentions the frustrations of academic life in Britain notes that his research of geology in the mining industry highlights the many important discoveries made by its practitioners as opposed to purely theoretical non mining scientists Annotation copyrighted by Book News Inc Portland OR *Duelling with the Past* Peter Verbist, 2010 towards intellectual autonomy In *Duelling with the Past* Verbist's analysis explores the links between computational sources and the emergence of the individual in the Middle Ages Book Jacket **Anno Domini** Georges Declercq, 2000 The new millennium forces us to reflect on systems for counting time and distinguishing historical eras This exhaustive authoritative study describes not only the origins and the early development of the Dionysian system of dating named after Dionysius Exiguus from its invention until its adoption throughout Western Europe in the course of the eleventh century but also its antecedents in Late Antiquity and the general context in which this era was conceived The result is a broad chronological and geographical survey encompassing developments over a period of one thousand years in both Latin Christendom and the Byzantine East This comprehensive survey is directed to both specialists and non specialists and will be indispensable for any reader interested in early Christian chronology **Journal for the History of Astronomy** , 1997 **Mathematics and the Medieval Ancestry of Physics** George Molland, 1995 The central theme of this volume lies in the medieval consciousness of mathematics and the variety of strategies adopted to apply it in other areas notably natural philosophy In diachronic terms Dr Molland considers ways in which ancient mathematics particularly geometry was assimilated in the Middle Ages and how it was radically transformed in the 17th century especially by Descartes A pervasive concern is with ideas of scientific progress the author argues that medieval commentatorial and disputational modes encouraged probing attitudes to existing knowledge aimed at deepening individual understanding rather than more aggressive endeavours to advance public knowledge characteristic of later periods What brought about this change is the subject of several studies here others focus more specifically on individual scholars in particular the important figure of Roger Bacon *Arches, Vaults, and Buttresses* Jacques Heyman, 1996

Science, Industry, and the Social Order in Post-revolutionary France Robert Fox, 1995 The essays in this volume focus on the public rather than the private face of science focusing on the interrelated activities of education popularization and the exploration of scientific and technical knowledge in industry They span the 18th and 19th centuries and up until 1914 *Manuscripta*, 1957 Issues for Feb 1957 July 1959 include a Checklist of the Vatican manuscript codices available for consultation at the Knights of Columbus Vatican Film Library at St Louis University pts 1 8 Studies in the Culture of Science in France and Britain Since the Enlightenment Maurice P. Crosland, 1995 A wide range of the author's previously published papers in the history of science is brought together in this book The articles which are mainly concerned with the 18th and 19th centuries are arranged in three sections science in the Enlightenment period science in an institutional context national and international science Some of the papers present a broad perspective others are of a more detailed nature drawing on the archives of the Paris Academy of Sciences and the Royal Society of London An original interpretation of the career of Priestley is followed by a historiographical article on Lavoisier Papers with a more social approach include subjects such as the professionalisation of science peer review and science and war It is argued that science became a profession in France long before it did in Britain France also created an important precedent in the academic world in demanding publications of research as credentials
