Cycloaddition Reactions of Heterocumulenes Henri Ulrich,2012-12-02

Cycloaddition Reactions of Heterocumulenes reviews cycloaddition reactions particularly on heterocumulenes having four electron bonds This book discusses the chemical relationship among the various classes of heterocumulenes including their chemical reactivity which ranges from highly reactive species to nearly inert compounds This text also investigates the nucleophilic reactions of ketenes and isocyanates with suitable substrates and if possible correlates available data with the reactivity of these species in cycloaddition reactions This book also investigates the cycloaddition reactions of carbon suboxide and other aspects of its chemistry due to the presence of many other interrelated reactions The synthetic organic chemist should also investigate the application of isocyanate reactions associated with the cumulative double bonds This text investigates carbodiimides as useful reagents for peptide synthesis and notes that the stability of carbodiimides increases significantly with sterical hindrance around the cumulative double bond system This book discusses three compounds that have a central electrophilic carbon atom namely carbon dioxide carbonyl sulfide and carbon disulfide The book also describes the cycloaddition reactions of sulfoxides of N sulfinylamines of N sulfinylsulfonamides and of sulfurdiimides This book can prove useful for researchers technicians and scientists whose works involve organic chemistry analytical chemistry and other related fields of chemistry

Giomi,Alberto Brandi,Fabrizio Machetti,2025-10-15 The aim of this Special Issue is to provide an overview of cycloaddition reactions at the start of the twenty first century Almost a century after the discovery of the Diels Alder cycloaddition this kind of pericyclic process continues to be a very efficient tool in synthetic organic chemistry and shows significant and widespread applications in different chemistry areas from traditional organic synthesis to medicinal chemistry materials chemistry and so on These reactions are beneficial to chemists because they provide valuable cyclic compounds often in a simple manner and with high and predictable regio and stereochemistry in addition to high atom economy These appealing features make cycloadditions privileged processes in organic synthesis This Special Issue in Reactions aims to collect recent results concerning the applications of 4 2 cycloadditions namely Diels Alder Hetero Diels Alder and 1 3 Dipolar cycloadditions as well as 2 2 processes The use of more efficient green and sustainable experimental conditions is strongly pursued to improve both the environmental aspects and the synthesis of carbo and heterocycles with noteworthy applications in natural pharmacological biological and materials domains

Cycloaddition reactions provide facile access to cyclic compounds with a high atom economy. As such, these reactions have found applications in almost all fields of chemistry including organic synthesis, material science, medicinal chemistry, and biological chemistry. In particular, the most studied and useful concerted cycloadditions, pericyclic reactions, are the Diels-Alder reaction and 1,3-dipolar cycloaddition. A systematic understanding of the reactivity, regio, and stereo selectivity of pericyclic reactions is a prerequisite for the rational design of these reactions. This thesis is dedicated to a study of four critical factors that are used to tune the reactivity of pericyclic reactions: the heteroatom, geometry of the reactant, catalyst, and external electric field. These factors are studied by performing computational studies on four representative Diels-Alder reactions or 1,3-dipolar cycloadditions using DFT calculations and quantum chemical analyses including the activation strain model (ASM), energy decomposition analysis (EDA), and quantitative Kohn-Sham molecular orbital (KS-MO) theory. Our findings based on these analyses furnish fundamental insights into how these internal and external factors alter the reactivity of cycloaddition reactions.
