Cytokines Produced By Polymorphonuclear Neutrophils:

Cytokines Produced by Polymorphonuclear Neutrophils Marco A. Cassatella, 1996-01-01 Summarizes the information gathered so far that neutrophils do indeed have the capacity for RNA protein synthesis and that they synthesize not only numerous proteins involved in their effector functions but also produce a variety of cytokines that among other functions coordinate the network of cellular interactions regulating natural and immune resistance Neutrophils also called polymorphonuclear leukocytes PMN are the first line of defense against invading microbes and had been thought to lack the capacity for synthesis because of their short life span The evidence suggests that neutrophils play an important role in eliciting and sustaining inflammation and may also contribute to the regulation of immune reactions Annotation c by Book News Inc Portland Or

Secretion of Cytokines and Chemokines by Innate Immune Cells Paige Lacy, 2015-05-19 The release of cytokines chemokines and other immune modulating mediators released from innate immune cells including eosinophils neutrophils macrophages dendritic cells mast cells and epithelial cells is an important event in immunity Cytokine synthesis and transportation occurs through the canonical protein trafficking pathway associated with endoplasmic reticulum and Golgi How cytokines are released upon their exit from the trans Golgi network varies enormously between cell types and in many cells this has not yet been characterized This issue delves into the plethora of cytokines released by innate immune cells and where possible shines light on specific mechanisms that regulate trafficking and release of Golgi derived vesicles Each cell type also shows varying degrees of dependency on microtubule organization and actin cytoskeleton remodeling for cytokine secretion Understanding the mechanisms of cytokine secretion will reveal the inner workings of individual innate immune cell types and allow identification of critical regulatory steps in cytokine release *The Neutrophil* Marco A. Cassatella, 2003-01-01 In the past neutrophils were often reduced to their ability to release preformed mediators and kill pathogens The present volume of Chemical Immunology and Allergy however offers a very broad and timely view by highlighting the versatile functions of neutrophils in inflammatory immune and antitumoral responses Leading investigators uncover novel aspects of neutrophils such as their capacity to control gene expression at the transcriptional level or respond to proinflammatory cytokines cytokine receptor chains gc and endogenous anti inflammatory lipid mediators Further points under discussion are neutrophils presenting antigens activating T cells participating in chemokine networking and producing IL 12 and other cytokines during infectious diseases Among the most original findings presented in this publication figure the observations that neutrophils cause increased vascular permeability during acute inflammation regulate directly the angiogenic process and influence tumor development A final article offers a detailed description of the molecular processes affecting neutrophil cell death and survival Unique in its field this valuable volume is recommended reading not only for immunologists and pathologists but also for cell biologists hematologists and immunobiologists

Trends in Innate Immunity Arne Egesten, Axel Schmidt, Heiko Herwald, 2008 The last decade has witnessed the delineation of innate immunity

a new area which has revolutionized our understanding of host parasite interactions and their impact on defense mechanisms in infectious and noninfectious diseases This volume of the book series Contributions to Microbiology provides an update of the current knowledge of this expanding field of research and highlights some of its most important aspects In eleven state of the art articles eminent international experts in the field address topics such as the innate immune system in mammals and insects microbial protein ligands antimicrobial peptides complement antibacterial chemokines the role of neutrophils and monocytes oxidative innate immune defenses and the effect of aging on innate immunity The book will be a valuable resource for microbiologists immunologists students scientists of other related disciplines and clinicians with an interest in infectious or immunological diseases
