Teaching Research Methods in the Social Sciences Mark Garner, Claire Wagner, Barbara Kawulich, 2016-04-01 How can excellence in the teaching of research methods be encouraged and ensured This question has become increasingly important following the adoption of research methodology as a core part of many postgraduate and undergraduate courses There has however been little discussion about the aims and methods of teaching the subject In this volume a number of authors from a variety of countries and disciplines employ their knowledge and experience towards the development of a pedagogical culture in research methods Their aim is to establish the extent of common concerns and challenges and to demonstrate ways in which these are being met Intended to provide both a stimulus and source materials for the development of a more substantial and systematic literature in the field the book will be of great interest to all those teaching research methods courses within social science disciplines

Students in Action Ian Stith, Wolff-Michael Roth, 2008-01-01 This book chronicles our work on cogenerative dialoguing in high schools and an elementary school Cogenerative dialoguing brings together students teachers and other relevant stakeholders in the educational enterprise to make sense of some common teaching learning experiences and issues arising thereof in order to design changes in their environment for the purpose of improving the teaching learning situation Our work addresses the overarching question What will happen when cogenerative dialogue praxis is introduced to an elementary school class More specifically we explore the use of cogenerative dialogues as research praxis in terms of some of the ethical issues inherent in classroom research how cogenerative dialogue praxis can serve as one viable solution for teachers to ethically mediate the various activity systems that constitute a class the internal contradictions inherent in cogenerative dialogues the unfocused moments during cogenerative dialogues the long term learning that takes place during

the cogenerative dialogues and finally we explore what we learned from the elementary teacher we worked with The intended audiences for this book are professionals or academics that have used or are curious about cogenerative dialogues Specifically the unique application of cogenerative dialogues in an elementary school speaks to teachers at that level interested in increasing student participation *Science, Learning, Identity*, 2007-01-01 Over the recent years identity has become one of the most central theoretical concept and topics of scholarship in a number of disciplines including science education In this volume leading science educators articulate in carefully prepared case studies their theoretical perspective on science learning and identity More importantly the authors of the chapters that in the different parts of the book engage each other in a collaboratively written chapter concerning some of the central issues that have arisen from their individual studies and in particular they engage each other over the similarities and differences between their approaches This book which features detailed case studies of identity as both resource and outcomes of learners in a variety of settings will be of interest to anyone concerned with learning science in and out of schools The book also caters for readers who have wondered about how identity mediates science learning and simultaneously how engagement in science related tasks and activities mediates the emergence and development of identities The general tenor of all chapters is a cultural historical and sociocultural framework that is brought to issues of identity thereby inherently transcending the individual person and linking identity to cultural possibilities *The Culture of Science Education*, 2007-01-01 The Culture of Science Education Its History in Person features the auto biographies of the professional lives of 22 science educators from 11 countries situated in different places along the career ladder within an ongoing narrative of the cultural history of the field Many contributors began to identify as science educators at about the time Sputnik was launched but others were not yet born Hence the book articulates the making of a field with its twists and turns that define a career as a scholar in science education Through the eyes of the contributing scholars the development of science education is seen in the United States and its spread to all parts of the world is tracked leading to a current situation where some universities from overseas are exporting science education to the United States through graduate programs especially doctoral degrees Other key issues addressed are the conceptual personae such as Jean Piaget and Lev Vygotsky who have shaped the field of science education and how publishing in English in high impact journals and obtaining external funds from private and governmental agencies have become driving forces in science education The Culture of Science Education Its History in Person was written for science educators with an interest in the history of science education as it is experienced as lived culture The book is intended as a reference book for scholars and as a text for graduate students involved in science education **Doing Educational Research** Kenneth Tobin, 2006 The authors explore a variety of topics from methodologies such as ethnography action research hermeneutics historiography psychoanalysis literary criticism to issues such as social theory epistemology and paradigms Back cover Teaching Methods in Science Subjects Promoting Sustainability Eila Jeronen, 2018-04-03 This

book is a printed edition of the Special Issue Teaching Methods in Science Subjects Promoting Sustainability that was published in Education Sciences
