Pipeline for Automated Code Generation from Backlog Items (PACGBI) Mahja Sarschar, 2025-01-31 This book investigates the potential and limitations of using Generative AI GenAI in terms of quality and capability in agile web development projects using React For this purpose the Pipeline for Automated Code Generation from Backlog Items PACGBI was implemented and used in a case study to analyse the AI generated code with a mix method approach The findings demonstrated the ability of GenAI to rapidly generate syntactically correct and functional code with Zero Shot

prompting The PACGBI showcases the potential for GenAI to automate the development process especially for tasks with low complexity However this research also identified challenges with code formatting maintainability and user interface implementation attributed to the lack of detailed functional descriptions of the task and the appearance of hallucinations Despite these limitations the book underscores the significant potential of GenAI to accelerate the software development process and highlights the need for a hybrid approach that combines GenAI s strengths with human expertise for complex tasks Further the findings provide valuable insights for practitioners considering GenAI integration into their development processes and set a foundation for future research in this field
