*Challenging Man-made Disease* Harriet Louise Hardy, 1983-01-01      Rachel Carson and Her Sisters Robert K Musil, 2014-04-01 In *Rachel Carson and Her Sisters* Robert K Musil redefines the achievements and legacy of environmental pioneer and scientist Rachel Carson linking her work to a wide network of American women activists and writers and introducing her to a new contemporary audience Rachel Carson was the first American to combine two longstanding but separate strands of American environmentalism the love of nature and a concern for human health Widely known for her 1962 best seller *Silent Spring* Carson is today often perceived as a solitary great woman whose work single handedly launched a modern environmental movement But as Musil demonstrates Carson's life's work drew upon and was supported by already existing movements many led by women in conservation and public health On the fiftieth anniversary of her death this book helps underscore Carson's enduring environmental legacy and brings to life the achievements of women writers and advocates such as Ellen Swallow Richards Dr Alice Hamilton Terry Tempest Williams Sandra Steingraber Devra Davis and Theo Colborn all of whom overcame obstacles to build and lead the modern American environmental movement

**Toxic Truth** Lydia Denworth, 2018-07-19 They didn't start out as environmental warriors Clair Patterson was a geochemist focused on determining the age of the Earth Herbert Needleman was a pediatrician treating inner city children But in the chemistry lab and the hospital ward they met a common enemy lead It was literally everywhere in gasoline and paint of course but also in water pipes and food cans toothpaste tubes and toys ceramics and cosmetics jewelry and batteries Though few people worried about it at the time lead was also toxic In *Toxic Truth* journalist Lydia Denworth tells the little known stories of these two men who were among the first to question the wisdom of filling the world with such a harmful metal Denworth follows them from the ice and snow of Antarctica to the schoolyards of Philadelphia and Boston as they uncovered the enormity of the problem and demonstrated the irreparable harm lead was doing to children In heated conferences and courtrooms the halls of Congress and at the Environmental Protection Agency the scientist and doctor were forced to defend their careers and reputations in the face of incredible industry opposition It took courage passion and determination to prevail against entrenched corporate interests and politicized government bureaucracies But Patterson Needleman and their allies did finally get the lead out since it was removed from gasoline paint and food cans in the 1970s the level of lead in Americans bodies has dropped 90 percent Their success offers a lesson in the dangers of putting economic priorities over public health and a reminder of the way science and individuals can change the world The fundamental questions raised by this battle what constitutes disease how to measure scientific independence and how to quantify acceptable risk echo in every environmental issue of today from the plastic used to make water bottles to greenhouse gas emissions And the most basic question how much do we need to know about what we put in our environment is perhaps more relevant today than it has ever been      Notable American Women Susan Ware, 2004 This latest volume brings the project up
