Plastics in the Aquatic Environment - Part I

Friederike Stock, Georg Reifferscheid, Nicole Brennholt, Evgeniia Kostianaia, 2021-10-29 This book offers a comprehensive review of how plastic pollution is affecting fresh and marine waters and what the current challenges in plastic waste assessment and management in the aquatic environment are. Plastic waste comprises particles with heterogeneous physicochemical properties such as large size range, different shapes, and polymer types with various additives determining their environmental fate and risk. This complexity raises several open research questions which are explored in this book. Examples are the plastic uptake by aquatic organisms, degradation processes, as well as sources and sinks in the environment. Readers will discover real case studies of plastic pollution detection and management in different parts of the world including Asia, America, and Europe which provide an integrated overview of the global scope of this issue. This book and the companion volume *Plastics in the Aquatic Environment Part II: Stakeholders' Role Against Pollution* are valuable resources to students, researchers, policymakers, and environmental managers interested in plastic pollution and working towards its reduction.

Sustainable Waste Management Towards Circular Bioeconomy Vijai Singh, 2025-10-24 This book covers a broad spectrum of topics on circular bioeconomy including underlying concepts, biomass conversion mechanisms, types of value added products, and technological advances in waste recycling. It also covers key aspects of a sustainable biorefinery like design and innovation, environmental and socio-economic impact, life cycle assessment, policy, and regulations. Sustainable circular bioeconomy (CBE) plays a key role in realizing the objective of Sustainable Development Goal 12: Responsible Consumption and Production. The expanding population and industrialization has resulted in colossal volumes of biomass waste and a huge demand for clean energy technologies. This has created immense scientific focus on circular bioeconomy which primarily deals with the conversion of wastes into sustainable and environment friendly value added products, thus enabling the minimization of waste. The recycling of wastes in closed loop systems produces bioproducts with low carbon footprint, high biodegradability, and other environmental and economic benefits. Written by eminent scientists in industrial biotechnology, this book presents detailed insights into the fundamentals and principles of sustainable waste management for successfully establishing circular bioeconomy. The primary audience of this book is the undergraduate, postgraduate, and PhD students, researchers, industrialists, policy makers, and stakeholders. The targeted readership of this book is vast because sustainable biorefinery constitutes one of the fastest growing areas that interest government and private institutions, scientific societies, non-governmental organizations, NGO, resource recovery, and biotechnology companies.
